

## Gain: 36 dB (Voltage Gain of $\times 63$ ) Frequency Bandwidth: 50 k to 1.5 GHz

The C5594 is designed as the most suitable amplifier unit for photomultiplier tubes and a non-inverting type amplifier.

This unit has high gain of 36 dB (voltage amplification of  $\times 63$ ) and wide frequency bandwidth of 50 kHz to 1.5 GHz, which can accurately amplitude the PMT pulse output.

Therefore it is well-matched to the application of Time Correlated Single Photon Counting (TCPC) for fluorescence life time measurement with MCP-PMT and various time response measurements with PMTs. It is possible to be operated at the applied voltage range of +12 to +16 volts.

The input and output connectors can be chosen by the combination of SMA and/or BNC.
