

Fabricated on the IMST substrate of our own originality and designed for use in intermediate-power, single-channel, single-supply voltage amplifiers. Their packages are made much more compact than those of the Type Nos. heretofore in use, thereby meeting the requirements for making the set smaller and slimmer. They are especially suited for use in electronic organs or electric pianos.

#### Features

- Pin assignment common to all Type Nos.
- No special muting circuit required because of small pop noise at the time of power supply ON/OFF.
- Since  $V_{CC}$  max is greatly improved, cost reduction can be attained by allowing a margin in transformer regulation.
- Capable of connecting tone control circuit.
