Anm.: -35 gesamter Farbbereich, Lieferung in Einzelgruppen (siehe Seite 5)

Die Standardlieferform von Serientypen beinhaltet eine untere bzw. eine obere Familiengruppe, die aus nur 3 bzw. 4 Halbgruppen besteht. Einzelne Halbgruppen sind nicht erhältlich.
In einer Verpackungseinheit / Gurt ist immer nur eine Halbgruppe enthalten.

Da die Gruppierung der LEDs in Lux mit der innovativem Partial Flux methode erfolgt, wurden Vergleichsmessungen an Bauteilen jeweils mit dem "Partial Flux" Testkopf und dem "Standard LED" Testkopf (gemäß CIE-127-B) durchgeführt. Der Vergleich soll als Orientierung dienen, er stellt keine eins zu eins Korrelation dar. Ziel dieses Vergleichs ist ein besseres Verständnis des Lichtflusses in [lux] in Relation zu den Lichtstärkewerten in [cd]. Das Verhältnis von typischen Werten die mit dem "Partial Flux" gemessen werden zu denen, die mit dem standard Messkopf gemessenen ist [lux] x 0.61 =[cd].

Note: -35 gesamter Farbbereich, Lieferung in Einzelgruppen (siehe Seite 5)

The standard shipping format for serial types includes a lower or upper family group of 3 or 4 individual groups. Individual half groups are not available.
No packing unit / tape ever contains more than one luminous intensity half group.

As the grouping of LED in lux is not common in the LED market some measurement to compare the results tested with "Partial Flux" Testhead compared to "standard LED" Testhead (in compliance with CIE-127-B) were made. The comparison should be used for a better understanding of partial flux in [lux] in relation to the values stated in luminous intensity [cd]. It should not be taken as one to one correlation. Comparison of typical values measured with "Partial Flux" and normal LED Testhead are [lux] x 0.61 =[cd].
