## WL

### Wide Selection of Two-Circuit Double-Break Limit Switches

- Rugged diecast housing
- High mechanical strength
- Oiltight, waterproof, dustproof construction
- Overtravel and high-precision types available
- Choose switches with neon lamp or LED status indicator

## ■ STATUS INDICATOR EQUIPPED SWITCHES

Any of the WL switches above can be ordered with a neon or LED indicator that shows normally open and normally closed status. For a neon indicator, add "-LE" to the end of a part number, for example, **WLD2-TSLE**. For an LED indicator, add "-LD" to the end of a part number, for example, **WLCA2-TSLD**.

**■ ROTARY ACTUATOR POSITIONING**

Actuators for rotary switches such as WLCA□-TS roller lever and WLCL-TS rod lever switches can be positioned within a 360° range. Loosen the Allen-head set bolt on the side of the actuator, position the actuator, then tighten in place.

**■ OPERATING HEAD POSITIONING**

The operating head of many switches can be set to four 90° positions to match installation requirements. Loosen the four Phillips head screws on the operating head, and lift the head off. Then, position with the shaft in the desired direction. Replace the four screws to fasten the operating head. Applicable switches include those with roller levers (WLCA□-TS), rod levers (WLCL-TS), horizontal plungers (WLSD□-TS) and roller plungers (WLD2-TS and WLD28-TS).

**Example of roller lever, rod lever and horizontal plunger switches**

**Example of roller plunger switches**

**■ OPERATING DIRECTION OF STANDARD SWITCHES**

Rotary actuator switches can be set for clockwise (CW), counterclockwise (CCW) or operation both ways (CW+CCW). To change the operating direction, loosen the four screws on the switch head. Then, lift off the head. The plunger marker inside is set parallel with the face plate, as shown at right. Turn the plunger so the marking faces left for CW or right for CCW as shown. Replace the actuator head in the direction suitable for the installation and tighten the four screws.

**■ ROLLER LEVER ACTUATOR POSITIONING**

The roller(s) on roller lever actuators may be faced inward toward the operating head or use the more typical installation with the roller lever facing away from the body. To change the actuator position, loosen the Allen-head set bolt, pull the actuator off, and reposition it on the shaft. Then, tighten the set bolt at the desired angle.

**■ FORK ROLLER LEVER ACTUATORS**

The illustration at right indicates the differences among the fork lever actuators. All may be reversed as shown above.

■ ADJUSTING LEVER AND ROD LENGTH

Switches with adjustable lever and rod actuators can be set to desired length by loosening the Allen-head set screw, setting the length. Then tighten the set screw.

■ STATUS INDICATOR EQUIPPED SWITCH OPERATION

WL switches are available with neon lamp (WL0000-TS-LE) or LED (WL0000-TS-LD) status indicators for easy monitoring and troubleshooting. They come factory-set for Normally Open operation ON. It is easy to change the status to Normally Closed operation ON. See the Installation section for details.

When connecting a limit switch to a programmable controller, select the neon lamp or LED with the smallest leakage current. Refer to the table at right.

Part number	Indicator type	Rated voltage	Leakage current
WL0000-TS-LE	Neon lamp	125 VAC 250 VAC	Approx. 0.6 mA Approx. 1.9 mA
WL0000-TS-LD	LED	10 to 115 VAC 10 to 115 VDC	Approx. 1 mA

To change operation to Normally Closed ON, remove the cover from the switch body, and rotate lamp holder 180°. Then, replace the unit in the housing.

**WLS-D-TS Horizontal Plain Plunger Switch**

\*Stainless steel plunger

**WLS-D2-TS Horizontal Roller Plunger Switch**

\* Stainless steel roller  
 \*\* Face nut (by loosening this nut, the direction of the roller may be changed).

**WLS-D3-TS Horizontal Ball Plunger Switch**

\*Stainless steel ball

WLNJ-TS Coil Spring Switch

\* The steel wire may be operated from any direction except the axial direction (↓).  
 \*\*Stainless steel coil spring.  
 \*\*\*Optimum operating range of the coil spring is within 1/3 of the entire length from the top end.

WLNJ30-TS Coil Spring Switch

\* The coil spring may be operated from any direction except the axial direction (↓). No clearance occurs between the wires of this spring when warped or bent.  
 \*\*Rubber cap and clamping band.  
 \*\*\*Optimum operating range of the coil spring is within 1/3 of the entire length from the top end.

WLNJ-S2TS Steel Wire Switch

\* The steel wire may be operated from any direction except the axial direction (↓).  
 \*\*Stainless steel wire.  
 \*\*\*Optimum operating range of the steel wire is within 1/3 of the entire length from the top end.

Unit: mm (inch)

**WLNJ-2TS Nylon Rod Switch**

\* The polyamide resin rod may be operated from any direction except the axial direction (↓).  
 No clearance exists between the wires of spring when warped or bent.  
 \*\* Polyamide resin rod.  
 \*\*\* Optimum operating range of the coil spring is within 1/3 of its entire length from the top end.

## Overtravel Type

Overtravel type limit switches offer a longer overtravel (OT) to accommodate different cam shapes. The key difference between "standard" and "overtravel" is in the angle of operation: overtravel types can operate at 90° on either side of the center point. Standard types are recommended for operation at 45° on either side of the center point. However, overtravel type switches cannot be expected to provide 90° operation on only one side.

■ OPERATING CHARACTERISTICS

**Legend:** OF = Operating Force (max.); RF = Reset Force (min.); OT = Overtravel (min.); PT = Pretravel  
 MD = Movement Differential (max.); OP = Operating Position; TT = Total Travel (min.)

Part number	Description	OF	RF	OT	PT	MD	TT
WLCA2-2-TS	Short roller lever	900 g (31.74 oz.)	50 g (1.76 oz.)	60°	25° ±5°	16°	90°
WLCA12-2-TS	Adjustable roller lever	900 g (31.74 oz.)	50 g (1.76 oz.)	60°	25° ±5°	16°	90°
WLCL-2-TS	Adjustable rod lever, 140 mm L	260 g (9.17 oz.)	10 g (0.35 oz.)	60°	25° ±5°	16°	90°
WLCAL4-2-TS	Adjustable rod lever, 380 mm L	80 g (2.82 oz.)	8 g (0.28 oz.)	60°	25° ±5°	16°	90°
WLCAL5-2-TS	Spring	80 g (2.82 oz.)	8 g (0.28 oz.)	60°	25° ±5°	16°	90°

Note:

Levers for WLCAL4-2-TS and WLCAL5-2-TS have a large tare, so positioning the actuator with the bottom up will reduce chattering.  
 Operating characteristics of WLCA12-2-TS are measured at arm length of 38 mm (1.29 in).  
 Operating characteristics of WLCL-2-TS are at arm length of 140 mm (5.51 in)  
 Operating characteristics of WLCAL4-2-TS are measured at rod length of 380 mm (1.25 ft)  
 Operating characteristics of WLCAL5-2-TS are measured at rod length of 412.5 mm (1.35 ft)

# High-Precision Type

The key differences between "high-precision" and "standard" limit switches are in the pretravel (PT) ratings and the repeat accuracy. High-precision switches have a pretravel (PT) of 5° compared to 20° for standard switches. The repeat accuracy is best compared by referring to the graph at right. High-precision switches are ideal for positioning control in machine tools and other applications.
