

# **HA17451AP/HA17451AFP**

Switching Regulator Controllers for DC/DC Converters

**HITACHI**

## **Description**

The HA17451 is a dual-channel switching regulator controller IC. Each channel contains the basic circuits for controlling a PWM-type switching-regulator power supply. Both channels are integrated onto the same chip. Both channels can be completely synchronized, using the same oscillator output waveform. Each channel can provide output voltages for step-up, step-down, inverting, and other converter topologies.

These controllers operate at voltages from 3.3 V to 40 V, making them suitable for a wide range of applications. They are ideal for chopper-type DC/DC converters. They are similar to the TL1451, but note that the HA17451A differs from the TL1451A.

## **Functions**

- Low-dropout 2.5V voltage reference
- Undervoltage lockout
- Triangle-wave oscillator
- Adjustable dead-time control
- Error amplifier
- Output driver (open-collector transistor type)
- PWM comparator

## Features

- Low dropout voltage of on-chip 2.5V voltage reference:  $V_{drop} = 0.2$  V (typ)
- Operates throughout wide supply voltagerange: 3.3 V to 40 V
- Large maximum output current: 50 mA (max)
- Undervoltage lockout circuit
  - High threshold voltage: 3.15 V (typ)
  - Low threshold voltage: 2.98 V (typ)
- Low current drain: 1.5 mA (typ)
- Operates at wide range of oscillator frequencies:  $f_{osc} = 1$  kHz to 300 kHz
- Dead time adjustable through full duty cycle range
- Surface-mount package (SOP16) for saving space (HA17451AFP)

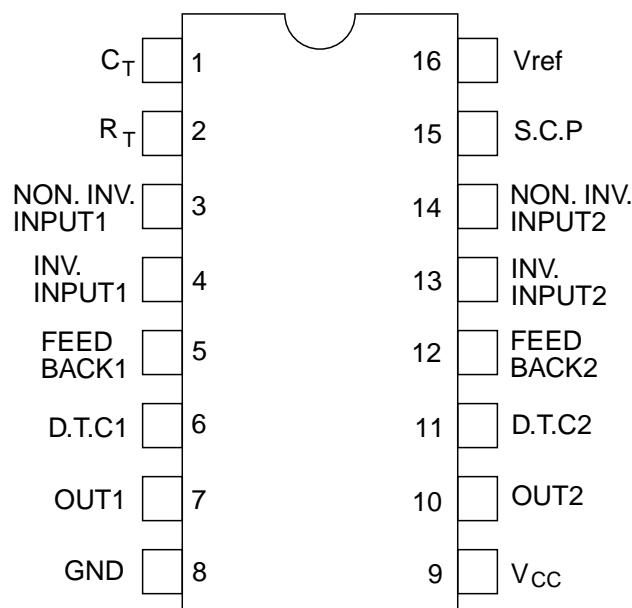

## Ordering Information

Type Name	Package
HA17451AP	DP-16
HA17451AFP	FP-16DA

## Pin Arrangement

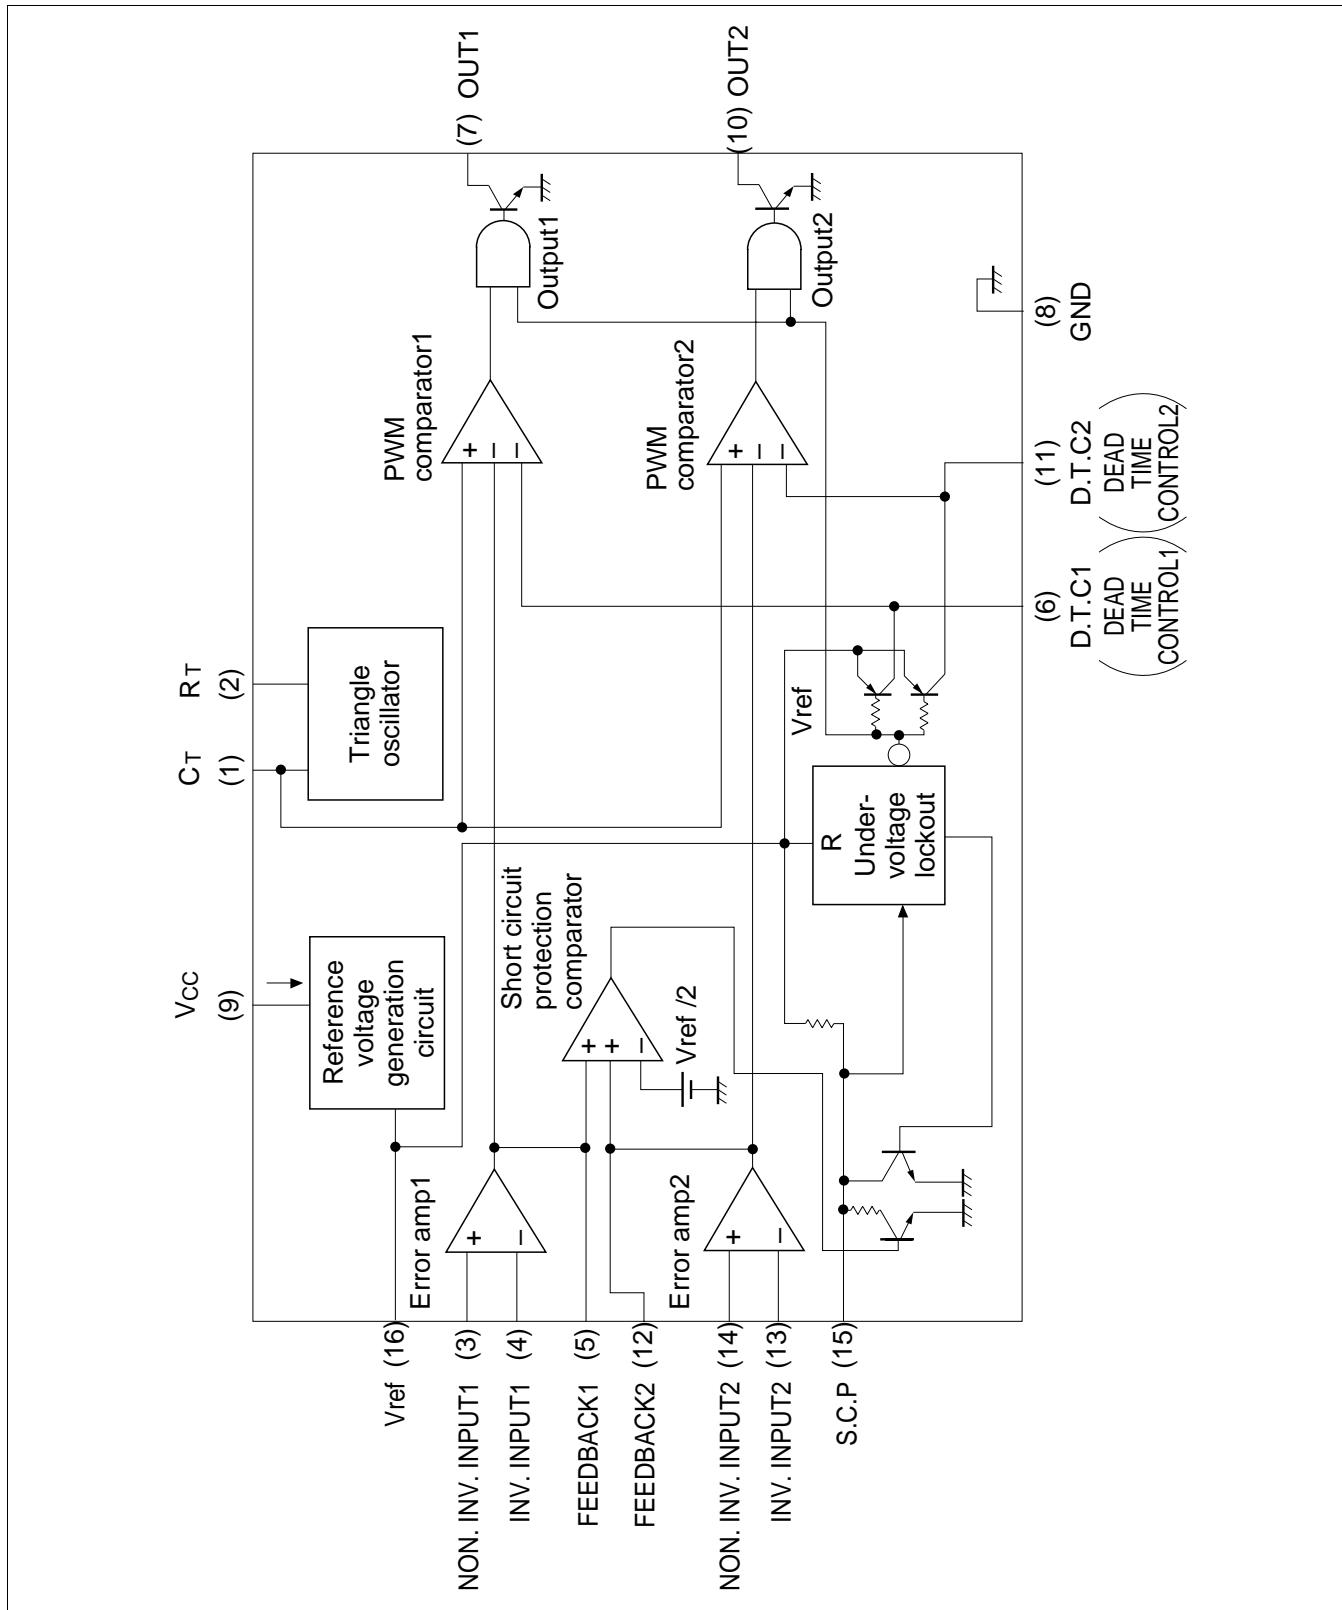

(Top view)

## Pin Functions

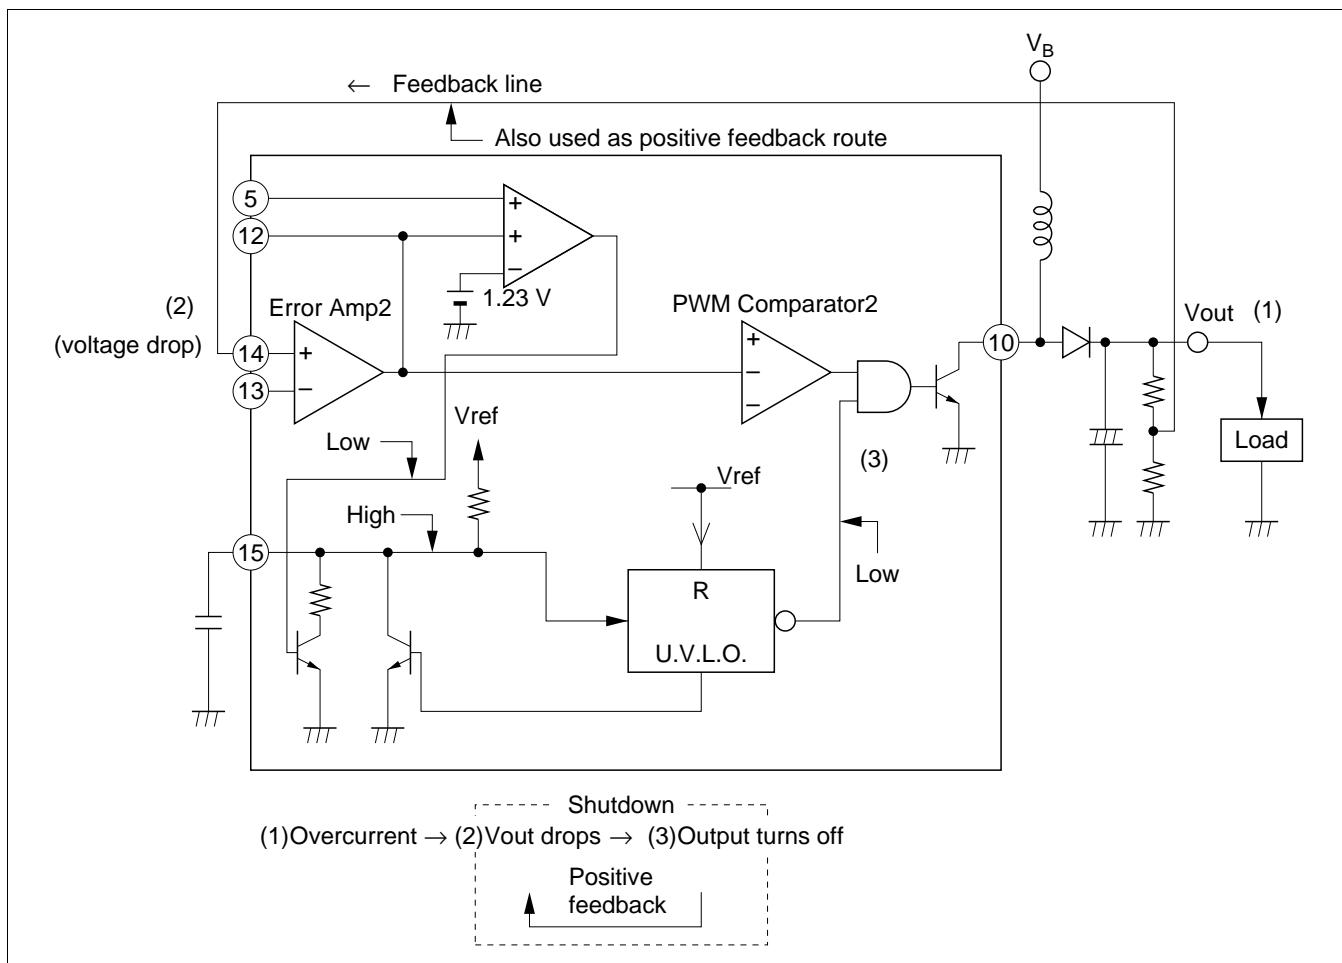

Pin No.	Symbols	Functions
1	$C_T$	Timing capacitor
2	$R_T$	Timing resistor
3, 14	NON. INV. INPUT	Non-inverting input of error amp
4, 13	INV. INPUT	Inverting input of error amp
5, 12	FEEDBACK	Output of error amp
6, 11	D.T.C	Dead time control
7, 10	OUT	Output
8	GND	Ground
9	$V_{cc}$	Input voltage
15	S.C.P	Short circuit protection
16	$V_{ref}$	Reference voltage output

## Block Diagram

## Short-circuit Protection in HA17451A

## Absolute Maximum Ratings ( $T_a = 25^\circ\text{C}$ )

Item	Symbol	Rating	Unit	Note
Power supply voltage	$V_{cc}$	40	V	
Error amplifier input voltage	$V_i$	20	V	
Collector output voltage	$V_o$	40	V	
Collector output current	$I_o$	50	mA	
Power dissipation	$P_T$	680	mW	*
Operating temperature	$T_{opr}$	– 20 to +85	$^\circ\text{C}$	
Storage temperature	$T_{stg}$	– 55 to +125	$^\circ\text{C}$	

Note: This value applies to the HA17451AP at ambient temperatures up to  $T_a = 45^\circ\text{C}$ . Derate by 8.3 mW/ $^\circ\text{C}$  above that point.

**Electrical Characteristics (Ta = 25°C, V<sub>CC</sub> = 6 V, f<sub>osc</sub> = 200 kHz)****Reference Section**

## Precautions

Precaution concerning inverting (negative voltage) output

Circuit diagram

Conditions

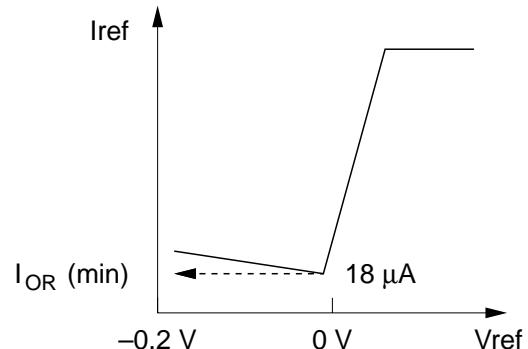

To prevent leakage current in the IC from interfering with stable and efficient operation, choose  $R_1$  and  $R_2$  values that satisfy the following condition:

$$R_1 + R_2 > \frac{|V_{OUT}| V}{18 \mu\text{A}}$$

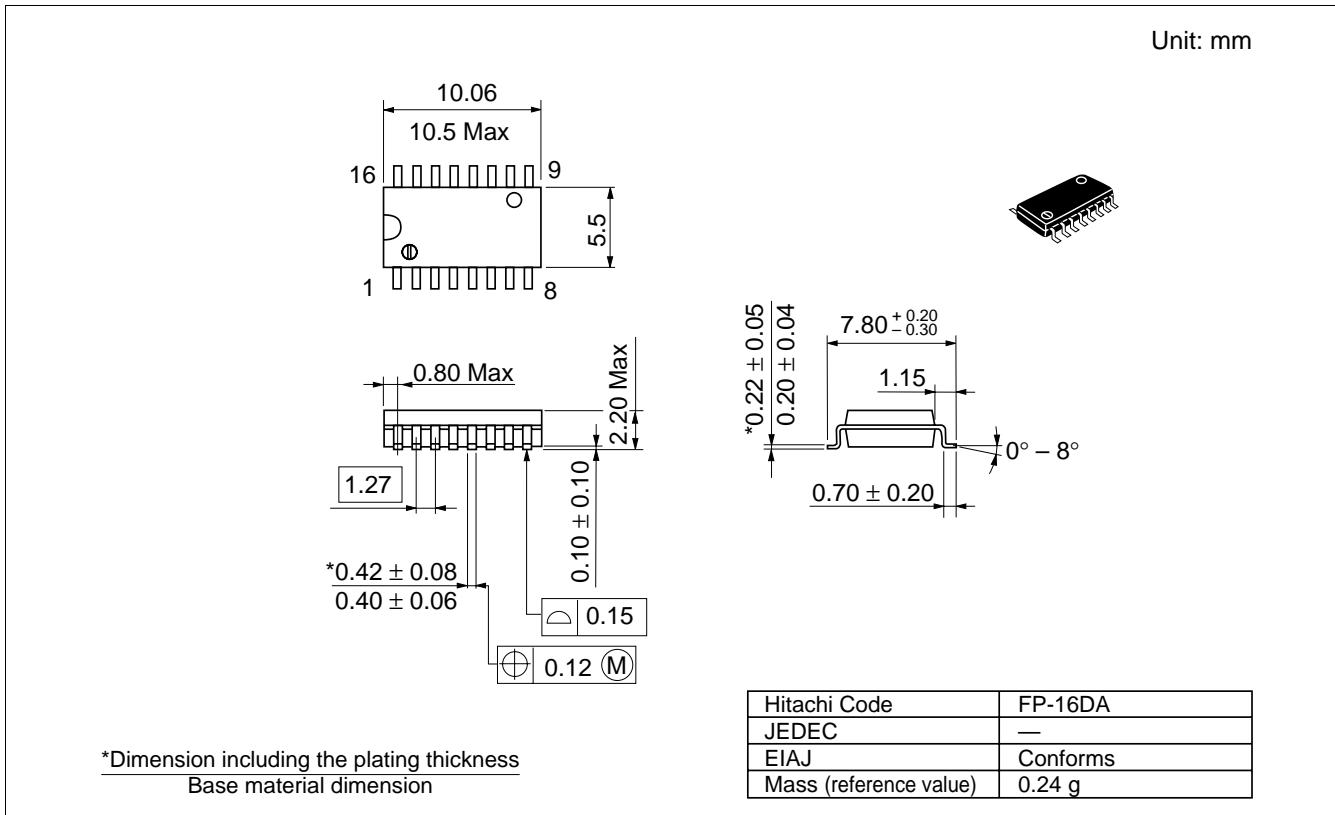

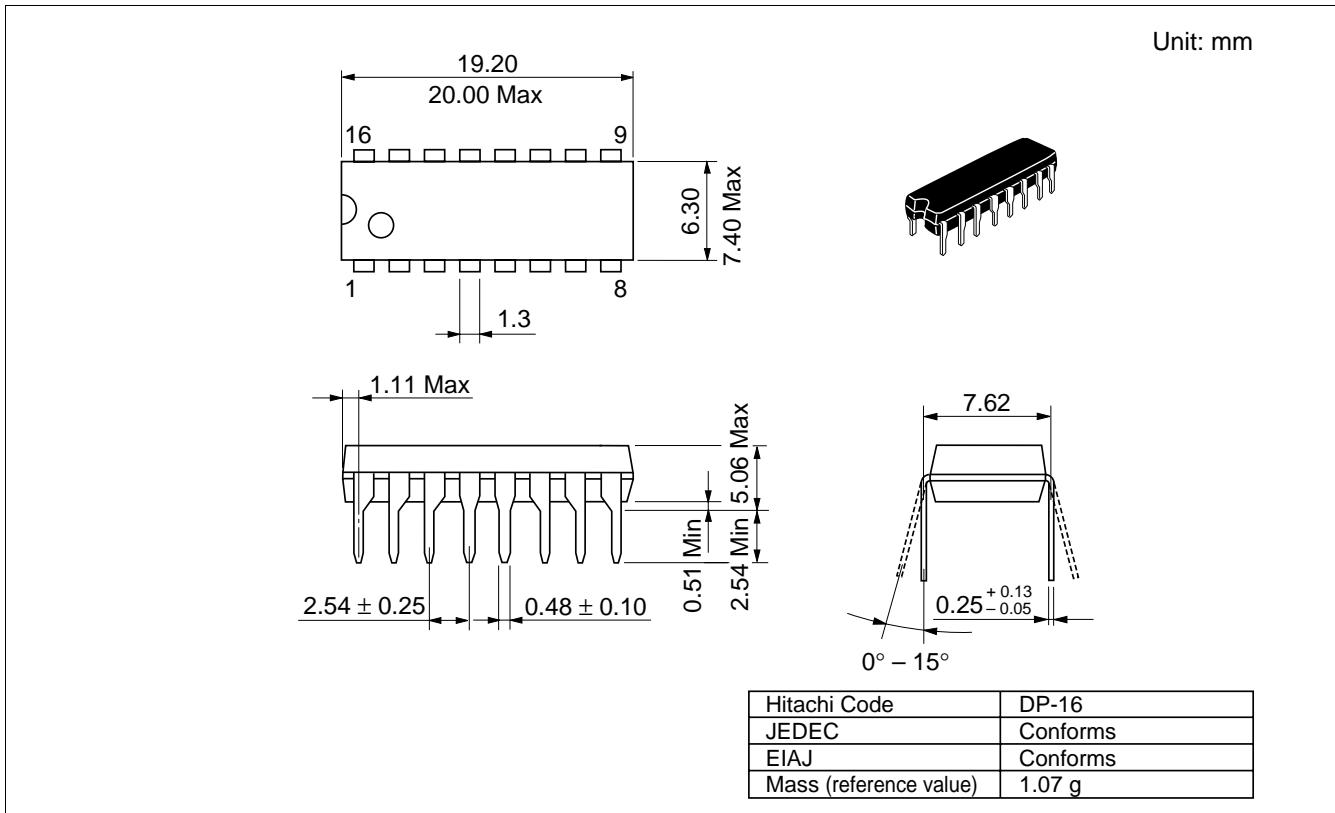

where,  $R_1, R_2$  : Feedback voltage resistors

$|V_{OUT}|$ : Absolute value of negative output voltage

$18 \mu\text{A}$ : Minimum current with negative voltage at reference voltage pin;  $I_{OR}$  (min)

## Cautions

1. Hitachi neither warrants nor grants licenses of any rights of Hitachi's or any third party's patent, copyright, trademark, or other intellectual property rights for information contained in this document. Hitachi bears no responsibility for problems that may arise with third party's rights, including intellectual property rights, in connection with use of the information contained in this document.
2. Products and product specifications may be subject to change without notice. Confirm that you have received the latest product standards or specifications before final design, purchase or use.
3. Hitachi makes every attempt to ensure that its products are of high quality and reliability. However, contact Hitachi's sales office before using the product in an application that demands especially high quality and reliability or where its failure or malfunction may directly threaten human life or cause risk of bodily injury, such as aerospace, aeronautics, nuclear power, combustion control, transportation, traffic, safety equipment or medical equipment for life support.
4. Design your application so that the product is used within the ranges guaranteed by Hitachi particularly for maximum rating, operating supply voltage range, heat radiation characteristics, installation conditions and other characteristics. Hitachi bears no responsibility for failure or damage when used beyond the guaranteed ranges. Even within the guaranteed ranges, consider normally foreseeable failure rates or failure modes in semiconductor devices and employ systemic measures such as fail-safes, so that the equipment incorporating Hitachi product does not cause bodily injury, fire or other consequential damage due to operation of the Hitachi product.
5. This product is not designed to be radiation resistant.
6. No one is permitted to reproduce or duplicate, in any form, the whole or part of this document without written approval from Hitachi.
7. Contact Hitachi's sales office for any questions regarding this document or Hitachi semiconductor products.
