NTE3104 Opto Interrupter Module Photo Reflector, NPN Transistor Output

Description:

The NTE3104 is a subminiature photo reflector whose GaAs infrared emitting diode and silicon transistor are assembled in the same package allowing for easy installation and handling.

The NTE3104 has an excellent S/N ratio (more than 40dB) and contains a built-in filter for cutting visible light.

Typical applications for the NTE3104 include strobe detection in audio turntables, tape end detection, automatic vending machines, and various other automatic control units.

Absolute Maximum Ratings: ($T_A = +25^\circ\text{C}$ unless otherwise specified)
