

## HIGH VOLTAGE BOOST DRIVER WITH 3 CHANNELS CONSTANT CURRENT REGULATORS

### DESCRIPTION

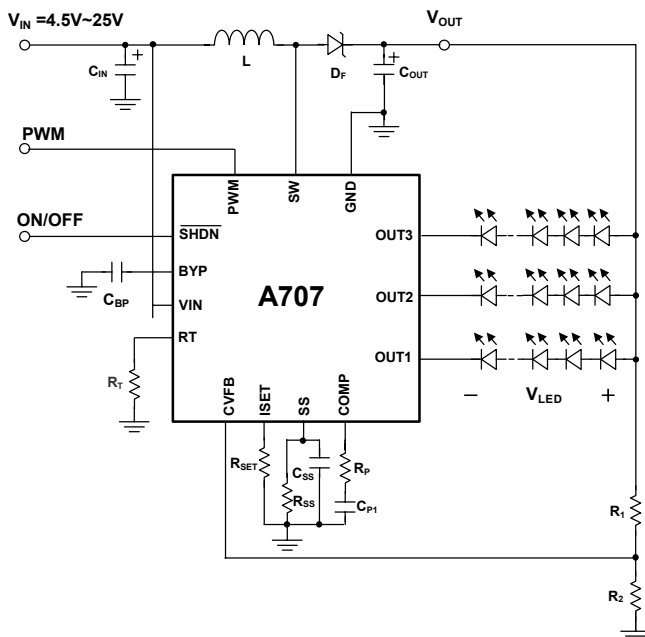

The A707 is a high voltage Boost driver with 3 channels adjustable constant current regulators for notebook LED backlight applications. Three regulated current ports are designed to provide uniform and pure DC constant current sinks for driving LEDs within a large range  $V_F$  variations. It can drive a number of LEDs in series/parallel configuration.

Users may adjust the output current from 5mA to 30mA through an external resistor,  $R_{SET}$ , which gives users flexibility in controlling the light intensity of LEDs. It also could adjust LED brightness via PWM pin with Pulse Width Modulation signal.

A feedback circuit is built in the between of Boost Driver and the Current Regulators. It could sense the lowest dropout voltage among used channels to Boost Driver in order to maintain the output voltage in optimal level. An OVP circuit is built for open-loop protection when any string becomes open.

The thermal protection function protects IC from over temperature damage. Also, the exposed thermal pad enhances the package power dissipation.

### TYPICAL APPLICATION CIRCUIT

### FEATURES

- High frequency DC/DC converter for LEDs.
- Integrated 40V power MOSFET.
- 4.5V ~ 25V wide input voltage range.
- 3 constant-current output channels.
- Output current adjustable through external resistor.
- Constant output current range: 5mA~30mA.
- 40V output sustaining voltage for up to 10 pcs of LEDs in series.
- LED open/short protection.
- TSSOP-14L Green Package.

### APPLICATIONS

- Automotive interior lighting
- LED backlight driver for NB and Monitors.

### PACKAGE PIN OUT

### ORDER INFORMATION

<b>F</b>	<b>TSSOP</b>
	<b>14 pin</b>
	<b>A707FGT</b>
Note: The letter "G" is marked for Green parts, and letter "T" is marked for Tape & Reel.
