

Digital transistors (built-in resistors)

DTC113ZUA / DTC113ZKA / DTC113ZSA

●Features

- 1) Built-in bias resistors enable the configuration of an inverter circuit without connecting external input resistors (see equivalent circuit).
- 2) Each bias resistor is a thin-film resistor. Since they are completely insulated, the input can be negatively biased. The insulation also eliminates most of the parasitic effects.
- 3) Only the on/off conditions need to be set for operation, making device design easy.
