

#### Features

- Operating voltage: 4.5V~5.5V
- LCD driving voltage: 8V~16V
- Applicable LCD duty cycle from 1/8 to 1/64

#### Applications

- Electronic dictionaries
- Portable computers

- Suitable for various types of LCD panel
- Bias voltage adjustable from an external source
- Remote controllers
- Calculators

## **General Description**

The HT1602 is a dot matrix LCD segment driver LSI implemented in CMOS technology. It is equipped with a 40-bit shift register (two 20-bit shift registers), a 40-bit latch (two 20-bit latches), a 40-bit level shifter, a 40-bit 4-level driver, and control circuits.

The HT1602 can convert serial data received from an LCD controller to parallel data and

## **Block Diagram**

then send them out as LCD driving waveforms to the LCD panel. The HT1602 can be applied up to 1/64 duty. Furthermore, the bias voltage which determines the LCD driving voltage can be optionally supplied from an external source, thus the chip is suitable for driving various types of LCD panel. These special features increase the versatility of the chip.

1

#### **Pad Assignment**

\* The IC substrate should be connected to VDD in the PCB layout artwork.

#### **Pad Description**

Pad No.	Pad Name	I/O	Description		
1~26	Y14~Y39	0	LCD driver outputs for segments*		
27	DO39	0	Shift register output for the 40th bit data		
28	DI20	Ι	Input data of shift register 2		
29	DO19	0	Shift register output for the 20th bit data		
30	VEE	Ι	LCD power supply		
31, 32	V3, V2	Ι	LCD bias supply voltage		
33	VSS	_	Negative power supply		
34	VDD	_	Positive power supply		
35	CLK	Ι	Clock pulse input for the shift register		
36	DI0	Ι	Input data of shift register 1		
37	LOAD	Ι	Latching signal to latch shift register data		
38	ALT	Ι	Alternate input signal for LCD driving waveforms		
39~52	Y0~Y13	0	LCD driver outputs for segments*		

\*: For Y0~Y39, any of VDD, V2, V3 or VEE can be selected as a display driving source according to the combination of latched data level and ALT signal. Refer to the following table:

Latched Data	ALT	Display Data Output Level		
Ц	Н	$V_{\rm EE}$		
11	L	V <sub>DD</sub>		
т	Н	V3		
L	L	V2		

## **Absolute Maximum Ratings\***

Supply Voltage	–0.3V to 6V
Input Voltage	$V_{SS}0.3V$ to $V_{DD}\mbox{+-}0.3V$

Storage Temperature	$-50^{\circ}C$ to $125^{\circ}C$
Operating Temperature	–20°C to 70°C

\*Note: These are stress ratings only. Stresses exceeding the range specified under "Absolute Maximum Ratings" may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.
