## 8XC251SA/SB/SP/SQ HIGH-PERFORMANCE CHMOS MICROCONTROLLER

Commercial/Express

- Real-time and Programmed Wait State Bus Operation
- Binary-code Compatible with MCS<sup>®</sup> 51
- Pin Compatible with 44-pin PLCC and 40pin PDIP MCS 51 Sockets
- Register-based MCS<sup>®</sup> 251 Architecture
  - 40-byte Register File
  - Registers Accessible as Bytes, Words, or Double Words
- Enriched MCS 51 Instruction Set
  - 16-bit and 32-bit Arithmetic and Logic Instructions
  - Compare and Conditional Jump Instructions
  - Expanded Set of Move Instructions
  - Linear Addressing
  - 256-Kbyte Expanded External Code/Data Memory Space
  - ROM/OTPROM/EPROM Options: 16 Kbytes (SB/SQ), 8 Kbytes (SA/SP), or without ROM/OTPROM/EPROM
  - 16-bit Internal Code Fetch
  - 64-Kbyte Extended Stack Space
  - On-chip Data RAM Options: 1-Kbyte (SA/SB) or 512-Byte (SP/SQ)
  - 8-bit, 2-clock External Code Fetch in Page Mode
  - Fast MCS 251 Instruction Pipeline

- User-selectable Configurations:
  - External Wait States (0-3 wait states)
  - Address Range & Memory Mapping
  - Page Mode
- 32 Programmable I/O Lines
- Seven Maskable Interrupt Sources with Four Programmable Priority Levels
- Three Flexible 16-bit Timer/counters
- Hardware Watchdog Timer
- Programmable Counter Array
  - High-speed Output
  - Compare/Capture Operation
  - Pulse Width Modulator
  - Watchdog Timer
- Programmable Serial I/O Port
  - Framing Error Detection
  - Automatic Address Recognition
- High-performance CHMOS Technology
- Static Standby to 16-MHz Operation
- Complete System Development Support
  - Compatible with Existing Tools
  - New MCS 251 Tools Available: Compiler, Assembler, Debugger, ICE
- Package Options (PDIP, PLCC, and Ceramic DIP)

A member of the Intel family of 8-bit MCS 251 microcontrollers, the 8XC251SA/SB/SP/SQ is binary-code compatible with MCS 51 microcontrollers and pin compatible with 40-pin PDIP and 44-pin PLCC MCS 51 microcontrollers. MCS 251 microcontrollers feature an enriched instruction set, linear addressing, and efficient C-language support. The 8XC251SA/SB/SP/SQ has 512 bytes or 1 Kbyte of on-chip RAM and is available with 8 Kbytes or 16 Kbytes of on-chip ROM/OTPROM/EPROM, or without ROM/OTPROM/EPROM. A variety of features can be selected by new user-programmable configurations.

PSEN#	0	<b>Program Store Enable</b> . Read signal output. This output is asserted for a memory address range that depends on bits RD0 and RD1 in configuration byte UCONFIG0 (see RD# and Chapter 4, "Device Configuration," in the 8XC251SA/SB/SP/SQ Embedded Microcontroller User's Manual).	_
RD#	0	<b>Read or 17th Address Bit (A16).</b> Read signal output to external data memory or 17th external address bit (A16), depending on the values of bits RD0 and RD1 in configuration byte UCONFIG0. (See PSEN# and Chapter 4, "Device Configuration," in the 8XC251SA/SB/SP/SQ Embedded Microcontroller User's Manual).	P3.7/A16
RST	I	<b>Reset</b> . Reset input to the chip. Holding this pin high for 64 oscillator periods while the oscillator is running resets the device. The port pins are driven to their reset conditions when a voltage greater than $V_{IH1}$ is applied, whether or not the oscillator is running. This pin has an internal pulldown resistor, which allows the device to be reset by connecting a capacitor between this pin and $V_{CC}$ . Asserting RST when the chip is in idle mode or powerdown mode returns the chip to normal operation.	_
RXD	I/O	<b>Receive Serial Data</b> . RXD sends and receives data in serial I/O mode 0 and receives data in serial I/O modes 1, 2, and 3.	P3.0

#### NOTES:

- 1. 18 address lines are bonded out (A15:0, A16:0, or A17:0 selected during chip configuration).
- 2. The special function registers (SFRs) and the register file have separate internal address spaces.
- 3. Data in this area is accessible by indirect addressing only.
- Devices reset into internal or external starting locations depending on the state of EA# and configuration byte information See EA#. See also UCONFIG1:0 bit definitions in the 8XC251SA/SB/SP/SQ Embedded Microcontroller User's Manual.
- The 16-Kbyte ROM/OTPROM/EPROM devices allow internal locations FF:2000H–FF:3FFFH to map into region 00:. In this case, if EA# = 1, a data read to 00:E000H–00:FFFFH is redirected to internal ROM/OTPROM/EPROM (see bit 1 in UCONFIG0). This is not available for 8-Kbyte ROM/OTPROM/EPROM devices.
- 6. This reserved area returns indeterminate values.
- 7. Data is accessible by direct and indirect addressing.
- 8. Data is accessible by direct, indirect, and bit addressing.
- 9. Data is accessible by direct, indirect, and register addressing.
- 10. Eight addresses at the top of all external memory maps are reserved for current and future device configuration byte information.

#### NOTES:

1. Under steady-state (non-transient) conditions, I<sub>OL</sub> must be externally limited as follows:

Maximum I<sub>OL</sub> per port pin: 10 mA Maximum I<sub>OL</sub> per 8-bit port:

port 0	26 mA
ports 1–3	15 mA
Maximum Total I <sub>OL</sub> for	
all output pins	71 mA

If  $I_{OL}$  exceeds the test conditions,  $V_{OL}$  may exceed the related specification. Pins are not guaranteed to sink current greater than the listed test conditions.

- 2. Capacitive loading on ports 0 and 2 may cause spurious noise pulses above 0.4 V on the low-level outputs of ALE and ports 1, 2, and 3. The noise is due to external bus capacitance discharging into the port 0 and port 2 pins when these pins change from high to low. In applications where capacitive loading exceeds 100 pF, the noise pulses on these signals may exceed 0.8 V. It may be desirable to qualify ALE or other signals with a Schmitt trigger or CMOS-level input logic.
- Capacitive loading on ports 0 and 2 causes the V<sub>OH</sub> on ALE and PSEN# to drop below the specification when the address lines are stabilizing.
- 4. Typical values are obtained using  $V_{CC} = 5.0$ ,  $T_A = 25^{\circ}C$  and are not guaranteed.

### 6.0 THERMAL CHARACTERISTICS

All thermal impedance data is approximate for static air conditions at 1 watt of power dissipation. Values change depending on operating conditions and application requirements. The Intel *Packaging Handbook* (order number 240800) describes Intel's thermal impedance test methodology.

#### **Table 16. Thermal Characteristics**

Package Type	θJA	эс <sup>θ</sup>
44-pin PLCC	46°C/W	16°C/W
40-pin PDIP	45°C/W	16°C/W
40-pin Ceramic DIP	30.5°C/W	10°C/W

### 9.0 REVISION HISTORY

#### Sheet4U.com

This (-003) revision of the 8XC251SA/SB/SP/SQ datasheet contains information on products with "[M] [C] '94 '95 C" as the last line of the topside marking. This datasheet replaces earlier product information. The following changes appear in the -003 datasheet:

- 1. Real-time wait state operation is described in the datasheet.
- 2. Memory map reserved locations are newly defined and the Memory Map is now referred to as the "Address Map."
- AC Characteristics have been updated. The following AC parameters have changed: T<sub>LLAX</sub>, T<sub>RLRH</sub>, T<sub>WLWH</sub>, T<sub>LLRL</sub>, T<sub>RLDV</sub>, T<sub>RHDZ1</sub>, T<sub>RHDZ2</sub>, T<sub>RHDZ2</sub>, T<sub>RHLH2</sub>, T<sub>WHLH</sub>, T<sub>AVDV1</sub>, T<sub>AVDV2</sub>, T<sub>AVRL</sub>, T<sub>AVWL1</sub>, T<sub>AVWL2</sub>, T<sub>QVWH</sub>, and T<sub>WHAX</sub>.
  DC Characteristics have been updated. The
- 4. DC Characteristics have been updated. The following DC specs have changed:  $I_{PD}$  max,  $I_{DL}$  typical,  $I_{DL}$  max,  $I_{CC}$  typical, and  $I_{CC}$  max.
- 5. An  $I_{CC}$  vs. Frequency graph is included.
- 6. Process information is no longer contained in the datasheet.
- The section "Programming and Verifying Nonvolatile Memory" has been deleted. See the 8XC251SA/SB/SP/SQ Embedded Microcontroller User's Manual. Timing and Characteristics for Programming and Verifying Nonvolatile

memory have been retained in this datasheet.

- Signature Byte information has been deleted. See the 8XC251SA/SB/SP/SQ Embedded Microcontroller User's Manual.
- 9. Sections in the datasheet are numbered.
- New sections have been created to provide better organization. These include "Nomenclature," "Pinout," "Signals," "Address Map," "Electrical Characteristics," "Thermal Characteristics," "Nonvolatile Memory Programming and Verification Characteristics", "Errata," and "Revision History"
- 11. Proliferation Options and Package Options are in the Nomenclature section.
- 12. Temperature range is contained in the Electrical Characteristics section under "Operating Conditions"
- 13. Bus timing diagrams have been organized into subsections.

The (-002) revision of the 8XC251SA/SB/SP/SQ datasheet contains information on products with "[M] [C] '94 '95 B" as the last line of the topside marking. This datasheet replaces earlier product information. The following changes appear in the -002 datasheet:

- 1. A corrected PDIP diagram appears on page 7.
- A corrected formula to calculate T<sub>LHLL</sub> is described on page 17.
- 3. The RD#/PSEN# waveform is changed in Figure 11 on page 25.
