Description

The SC2982 is a 50mA ultra low dropout linear regulator with a built in CMOS/TTL logic level enable switch. It is designed specifically for battery powered applications where low quiescent current and low dropout are critical for battery longevity.

The SC2982 uses a Semtech proprietary internal PNP device for the pass element, providing a low dropout voltage of 100mV at a load of 50mA, while maintaining a ground pin current of 600µA.

The output noise is reduced by placing a 10nF capacitor on pin 4 (bypass).

Each device contains a bandgap reference, error amplifier, PNP pass element, thermal and current limiting circuitry and resistor divider network for setting output voltage.

The SC2982 is packaged in a 5 pin SOT-23 surface mount package for a very small footprint and requires only a 1µF capacitor on the output for a minimum number of external components.

Features

- ◆ Ultra low dropout voltage - 100mV @ 50mA
- ◆ Guaranteed 50mA output current
- ◆ Low ground pin current at all loads
- ◆ <1µA quiescent current in shutdown
- ◆ Wide input supply voltage range 2.5V to 16V
- ◆ Wide output voltage range
- ◆ Excellent line regulation
- ◆ Industrial temperature range
- ◆ Surface mount packaging (5 pin SOT-23)

Applications

- ◆ Battery Powered Systems
- ◆ Cellular Telephones
- ◆ Cordless Telephones
- ◆ Pagers
- ◆ Personal Digital Assistants
- ◆ Portable Instrumentation
- ◆ Cameras
- ◆ Portable Consumer Equipment
- ◆ PCMCIA Cards

Typical Application Circuit

Notes:

- (1) C_{IN} is needed if the device is far from the supply's filter capacitors, or for operation from a battery. A value of 1µF or greater should be used. C_{IN} may be a tantalum or aluminum electrolytic capacitor.
- (2) C_O should be a 1µF or greater tantalum or aluminum electrolytic capacitor. Larger value capacitors will improve the overall transient response. Due to their very low ESR, ceramic capacitors should not be used.
- (3) C_{BYP} should be placed as close as possible to pin 4 and ground. A 10nF ceramic capacitor is recommended.
- (4) EN should be tied to VIN if the shutdown feature is not required. Maximum EN voltage = VIN.

Notes:

(1) Defined as the input to output differential at which the output voltage drops 100mV below the value measured at a differential of 1V.

(2) As the load resistance further decreases, the SC2982 folds back the output current to approximately 150mA at $V_o = 0V$.

Pin Descriptions

Pin	Pin Name	Pin Function
1	VIN	Supply voltage input.
2	GND	Ground.
3	EN	Active high enable input. Connect to VIN if not being used.
4	BYP	Reference bypass. Connect a 10nF capacitor between this pin and GND to reduce output noise
5	VO	Voltage output.
