JEDEC TO-205AF

The IRFF110, IRFF111, IRFF112 and IRFF113 are n-channel enhancement-mode silicon-gate power field-effect transistors designed for applications such as switching regulators, switching converters, motor drivers, relay drivers, and drivers for high-power bipolar switching transistors requiring high speed and low gate-drive power. These types can be operated directly from integrated circuits.

The IRFF-types are supplied in the JEDEC TO-205AF (LOW-PROFILE TO-39) metal package.
