

STEREO AMPLIFIER

- WIDE SUPPLY VOLTAGE RANGE (3 to 36V)
- SINGLE OR SPLIT SUPPLY OPERATION
- VERY LOW CURRENT CONSUMPTION (0.8mA)
- VERY LOW DISTORTION
- NO POP-NOISE

DESCRIPTION

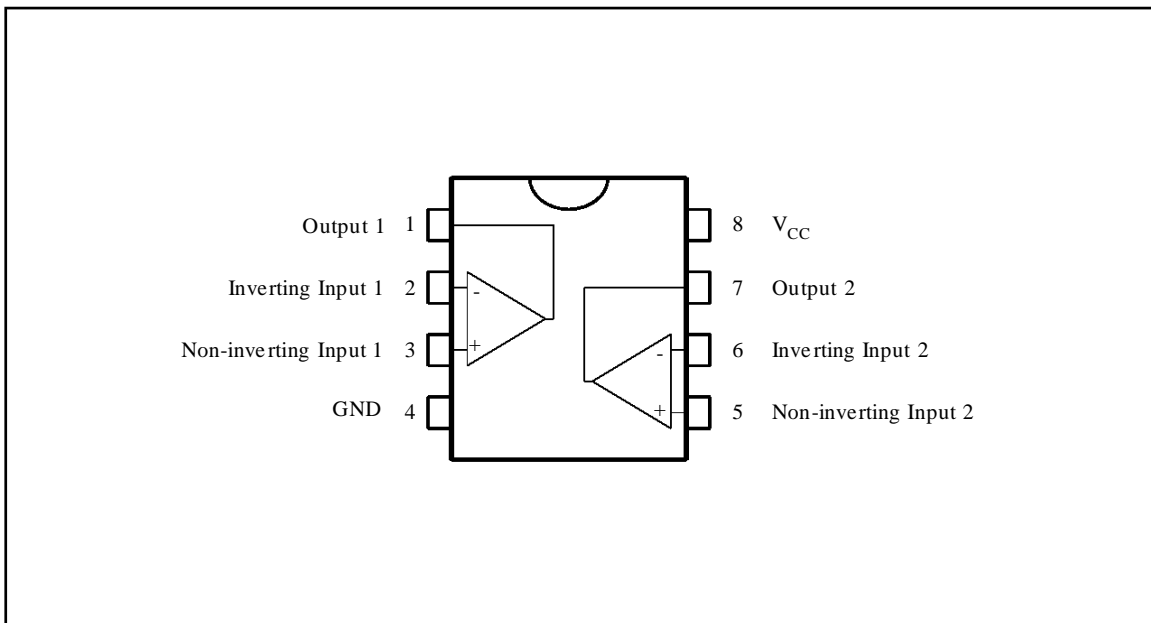

The TDA2320A is a stereo class A preamplifier intended for application in portable cassette players and high quality audio systems.

The TDA2320A is a monolithic integrated circuit in a 8 lead plastic dip.

ORDER CODES

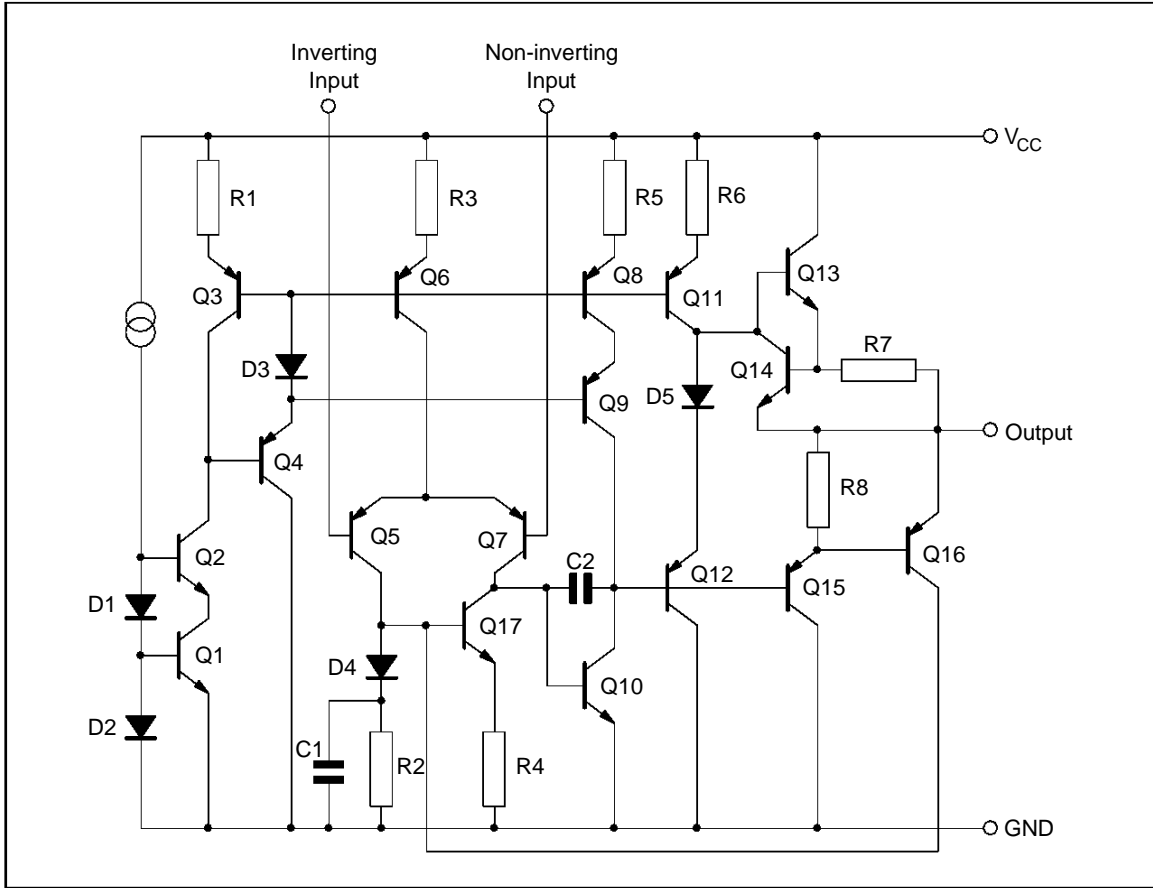

Part Number	Temperature Range	Package
		N
TDA2320A	-40°C, +105°C	•

Figure 18 :200Hz to 2kHz Active Bandpass Filter for Midrange Speakers

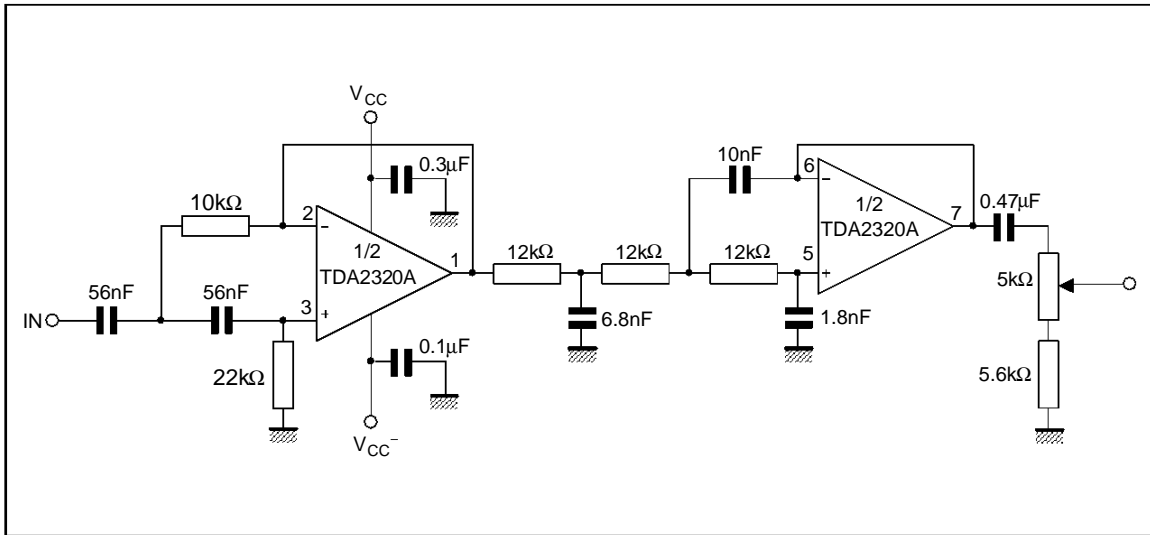

Figure 19 :Subsonic Filter

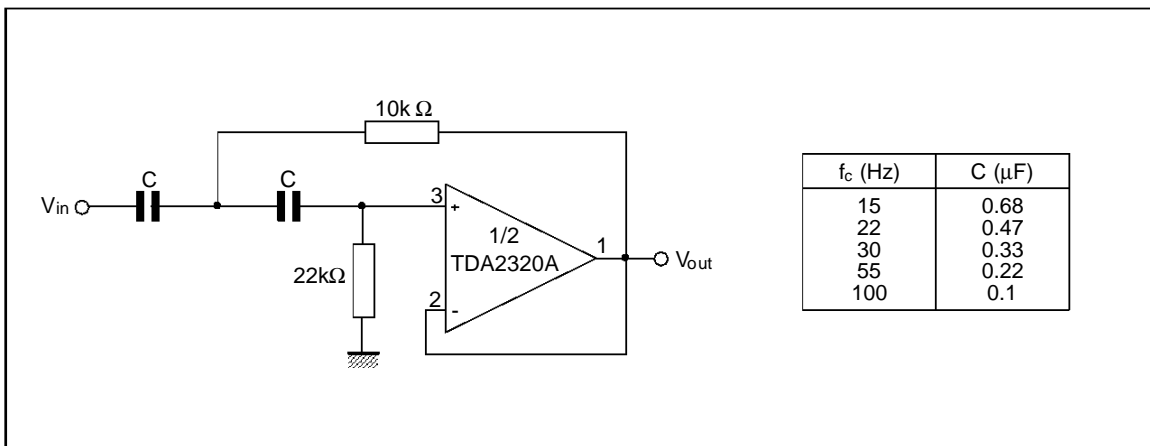

Figure 20 :High-cut Filter

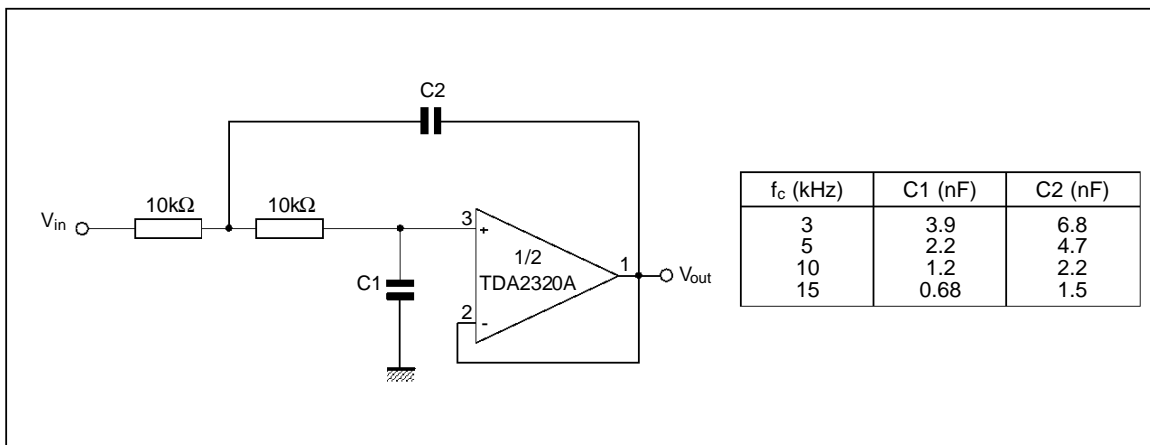

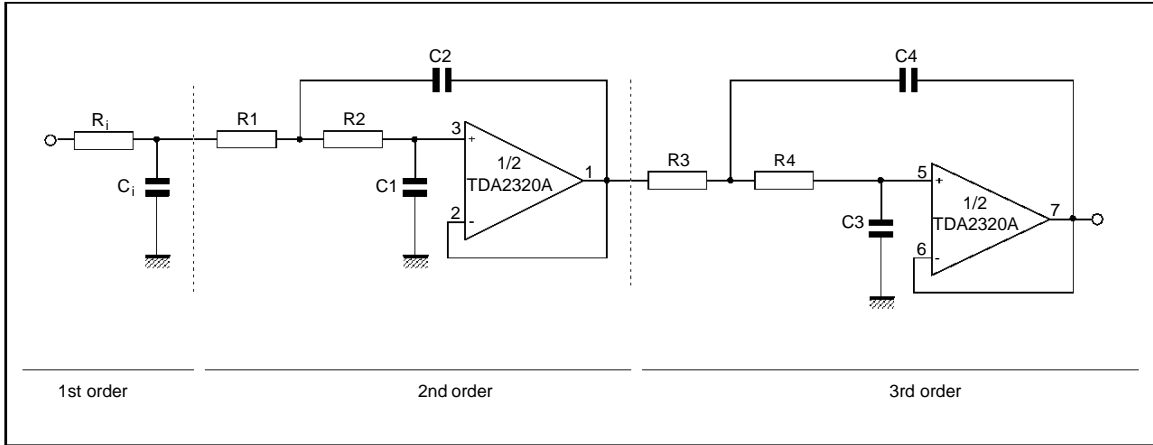

Figure 21 : Fifth Order 3.4kHz Low-pass Butterworth Filter

For $f_c = 3.4\text{kHz}$ and $R_i = R_1 = R_2 = R_3 = R_4 = 10\text{k}\Omega$, we obtain :

$$C_1 = 1.354 \cdot \frac{1}{R} \cdot \frac{1}{2\pi f_c} = 6.33\text{nF}$$

$$C_3 = 0.309 \cdot \frac{1}{R} \cdot \frac{1}{2\pi f_c} = 1.45\text{nF}$$

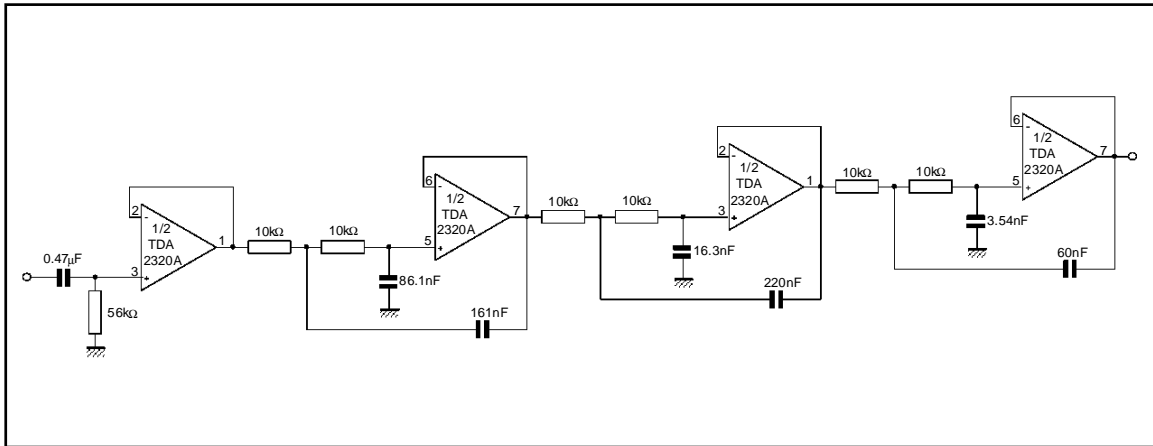

$$C_1 = 0.421 \cdot \frac{1}{R} \cdot \frac{1}{2\pi f_c} = 1.97\text{nF}$$

$$C_4 = 3.325 \cdot \frac{1}{R} \cdot \frac{1}{2\pi f_c} = 15.14\text{nF}$$

$$C_2 = 1.753 \cdot \frac{1}{R} \cdot \frac{1}{2\pi f_c} = 8.20\text{nF}$$

The attenuation of the filter is 30dB at 6.8kHz and better than 60dB at 15kHz.

Figure 22 : Sixth-pole 355Hz Low-pass Filter (Chebychev type)

This is a 6-pole Chebychev type with $\pm 0.25\text{dB}$ ripple in the passband. A decoupling stage is used to avoid the influence of the input impedance of the filter's characteristics.

The attenuation is about 55dB at 710Hz and reaches 80dB at 1065Hz. The in band attenuation is limited in practice to the $\pm 0.25\text{dB}$ ripple and does not exceed $1/2\text{dB}$ at $0.9f_c$.
