

MM5484 16-Segment LED Display Driver

General Description

The MM5484 is a low threshold N-channel metal gate circuit using low threshold enhancement and ion implanted depletion devices. The MM5484 is available in a 22-pin molded package and is capable of driving 16 LED segments. The MM5484 is designed to drive common anode separate cathode LED displays.

Features

- Serial data input
- Wide power supply operation
- 16 output, 15 mA sink capability

- MM5484 is cascadeable
- TTL compatibility
- No load signal required
- Non multiplex display
- 2½ digit capability—MM5484

Applications

- COPSTM or microprocessor displays
- Instrumentation readouts
- Industrial control indicator
- Relay driver

Note 1: Under no condition should the power dissipated by the segment driver exceed 50 mW nor the entire chip power dissipation exceed 500 mW.

Note 2: AC input waveform specification for test purpose: $t_r \leq 20$ ns, $t_f \leq 20$ ns, $f = 500$ kHz, 50% $\pm 10\%$ duty cycle.

Note 3: Clock input rise and fall times must not exceed 500 ns.

Functional Description

The MM5484 is designed to drive LED displays directly. Serial data transfer from the data source to the display driver is accomplished with 3 signals, DATA IN, CLOCK and ENABLE. The signal ENABLE acts as an envelope and only while this signal is at a logic '1' do the circuits recognize the clock signal.

While ENABLE is high, data on the serial data input is transferred and shifted in the internal shift register on the rising clock edge, i.e. a logic '0' to logic '1' transition.

When the ENABLE signal goes to a low (logic zero state), the contents of the shift register is latched and the display will show the new data. While new data is being loaded into the SR the display will continue to show the old data.

For the MM5484, data is output from the serial DATA OUT pin on the falling edge of clock so cascading is made simple with race hazards eliminated.

When the chip first powers on, an internal power on reset signal is generated which resets the SR and latches to zero so that the display will be off.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
