

Description

The Bay Linear B3431 is a three terminal adjustable shunt regulator with thermal stability over Temperature range. Using two external resistors allows the output voltage to be adjusted from 2.5V to 36V. With a sharp turn on characteristics the B3431 a superior replacement for zener diode applications.

The B3431 shunt regulator has a tolerance of 0.5% which has proven to be sufficient to overcome all of the other errors in the system to virtually eliminate the need for trimming in the power supply manufacturers assembly line and contribute a significant cost savings.

Features

- **Wide Operating Range ...1mA to100mA**
- **Tight Band Gap Tolerance0.5%**
- **Low Temp. Coefficient.....30 ppm/°C**
- **Wide temp range of -40 to +105°C**
- **Available in SOT-23 package**

Applications

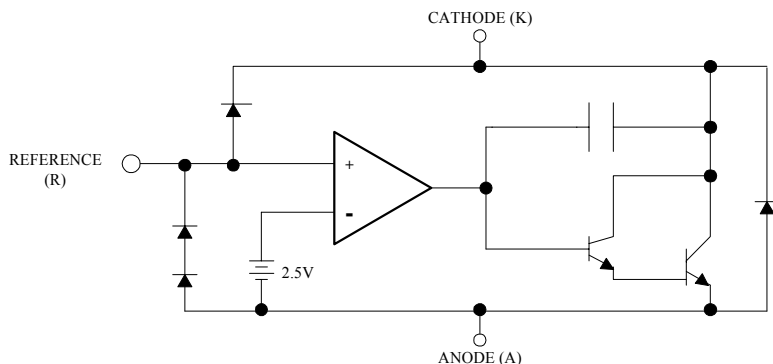

- **Switching Power Supplies**
- **Adjustable Power Supplies**
- **Linear Regulators**
- **Battery Powered Equipment**
- **Monitors, TV, VCR**
- **Instrumentation**

Package Information

Ordering & Marking Information

Package	Tolerance		
	0.5%	1%	2%
SOT-23	B3431AK3	B3431BK3	B3431CK3

Absolute Max Ratings

Parameter	Symbol	Maximum	Units
Cathode Voltage	V_Z	37	V
Continuous Cathode Current	I_Z	150	mA
Reference Input Current	I_{REF}	10	mA
Power Dissipation at $T_A = 25^\circ\text{C}$			
S0-8	P_D	750	mW
TO-92		775	
SOT-23-3		200	
Thermal Resistance			
SOT-23-3	θ_{JA}	575	$^\circ\text{C/W}$
S0-8		175	
TO-92		160	
Operating Junction Temperature Range	T_J	-40 to +150	$^\circ\text{C}$
Storage Temperature Range	T_{STG}	-65 to +150	$^\circ\text{C}$
Lead Temperature (Soldering) 10 seconds	T_{LEAD}	300	$^\circ\text{C}$
ESD Rating (Human Body Model)	T_{ESD}	2	kV

Recommended Operating Conditions

	Min	Max	Symbol
Cathode Voltage, V_Z	V_{REF}	36	V
Cathode Current, I_Z	0.1	150	mA

Electrical Characteristics

Unless specified: $T_A = 25^\circ\text{C}$. Values in bold apply over full operating ambient temperature.

Calculating Average Temperature Coefficient (TC)

- $TC \text{ in mV}/^{\circ}C = \frac{\Delta V_{REF} \text{ (mV)}}{\Delta T_A}$
- $TC \text{ in } \%/^{\circ}C = \frac{\left(\frac{\Delta V_{REF}}{V_{REF \text{ at } 25^{\circ}C}} \right)}{\Delta T_A} \times 100$
- $TC \text{ in ppm}/^{\circ}C = \frac{\left(\frac{\Delta V_{REF}}{V_{REF \text{ at } 25^{\circ}C}} \right)}{\Delta T_A} \times 10^6$

Packaging Information

SOT-23

Advance Information- These data sheets contain descriptions of products that are in development. The specifications are based on the engineering calculations, computer simulations and/ or initial prototype evaluation.

Preliminary Information- These data sheets contain minimum and maximum specifications that are based on the initial device characterizations. These limits are subject to change upon the completion of the full characterization over the specified temperature and supply voltage ranges.

The application circuit examples are only to explain the representative applications of the devices and are not intended to guarantee any circuit design or permit any industrial property right to other rights to execute. Bay Linear takes no responsibility for any problems related to any industrial property right resulting from the use of the contents shown in the data book. Typical parameters can and do vary in different applications. Customer's technical experts must validate all operating parameters including "Typical" for each customer application.

LIFE SUPPORT AND NUCLEAR POLICY

Bay Linear products are not authorized for and should not be used within life support systems which are intended for surgical implants into the body to support or sustain life, in aircraft, space equipment, submarine, or nuclear facility applications without the specific written consent of Bay Linear President.
