Description

M-Pulse's MP4TD1120 is a high performance silicon bipolar MMIC housed in a hermetic high reliability package. The MP4TD1120 is designed for use in 50Ω or 75Ω systems where a high dynamic range gain block is required. Typical applications include narrow and wide band IF and RF amplifiers in industrial and military applications. The 20 style package is a superior thermal dissipation package. This allows larger DC Current and the resultant improvement in output power and P_{1dB} performance than that available from the packages for this chip.

The MP4TD1120 is fabricated using a 10 GHz f_T silicon bipolar technology that features gold metalization and IC passivation for increased performance and reliability.
