for video and AF output stages

BF 847, BF 848, and BF 849 are epitaxial PNP silicon planar transistors in plastic package similar to TO 202. The collector is conductively connected to the metallic mounting area of the transistor. The transistors are especially designed for use in video output stages of TV receivers, for AF output stages of high operating voltage and as driver transistors in horizontal deflection circuits.

| Type   | Ordering code |
