

**PRELIMINARY DATA SHEET**

# SKY77171 AutoSmart™ Power Amplifier Module for WCDMA (1920-1980 MHz)

**Applications**

- WCDMA handsets

**Features**

- Low voltage positive bias supply
  - 3.2 V to 4.2 V
- Low  $V_{REF}$ 
  - 2.85 V, nominal
- Low  $I_{REF}$ 
  - Less than 1 mA
- Supports low collector voltage operation
- Good linearity
- High efficiency
- Large dynamic range
- 10-pad package
  - 4 x 4 x 1.15 mm
- Power down control
- InGaP

**Description**

The SKY77171 AutoSmart™ Power Amplifier Module (PAM) is a fully matched 10-pad surface mount module developed for Wideband Code Division Multiple Access (WCDMA) handsets. This small and efficient module packs full 1920–1980 MHz bandwidth coverage into a single compact package. The SKY77171 meets the stringent spectral linearity requirements of WCDMA transmission with high power added efficiency for power output of up to 28 dBm.

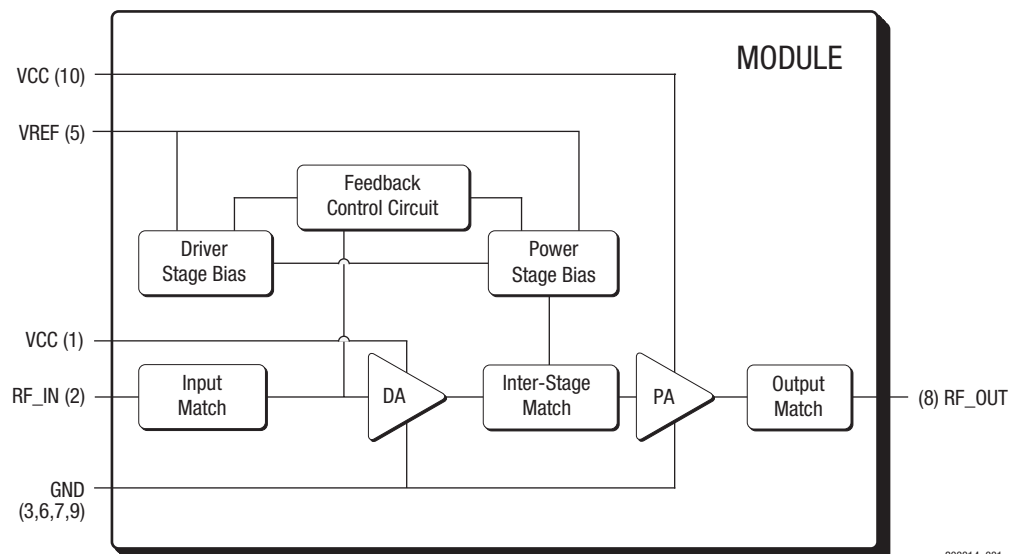

AutoSmart™ power amplifier technology internally adjusts the RF transistor bias level throughout the dynamic operating range to minimize battery current consumption and ensure sufficient linear performance to meet WCDMA system requirements. The result is a significant savings in average battery current without the complications of a system-supplied mode function signal or analog bias control. AutoSmart™ response time is more than adequate for RF access probe and discontinuous transmission operation.

The single Gallium Arsenide (GaAs) Microwave Monolithic Integrated Circuit (MMIC) contains all active circuitry in the module. The MMIC contains on-board bias circuitry, as well as input and interstage matching circuits. Output match into a 50-ohm load is realized off-chip within the module package to optimize efficiency and power performance.

The SKY77171 AutoSmart™ PAM is manufactured with Skyworks' GaAs Heterojunction Bipolar Transistor (HBT) process that provides for all positive voltage DC supply operation while maintaining high efficiency and good linearity. Primary bias to the SKY77171 is supplied directly from a three-cell nickel cadmium, a single-cell lithium ion, or other suitable battery with an output in the 3.2 to 4.2 volt range. Power down is accomplished by setting the voltage on the low current reference pin to zero volts. No external supply side switch is needed as typical "off" leakage is a few microamperes with full primary voltage supplied from the battery.

**NEW**

Skyworks offers lead (Pb)-free "environmentally friendly" packaging that is RoHS compliant (European Parliament for the Restriction of Hazardous Substances).

### Electrical Target Specifications

The following tables list the electrical characteristics of the SKY77171 Power Amplifier. [Table 1](#) lists the absolute maximum ratings, while [Table 2](#) shows the recommended operating

conditions to achieve the performance characteristics listed in [Table 4](#). [Table 3](#) presents a truth table for the power settings.

**Table 1. Absolute Maximum Rating <sup>(1)</sup>**

Parameter	Symbol	Minimum	Nominal	Maximum	Unit	
RF Input Power	P <sub>IN</sub>	—	0	7	dBm	
Supply Voltage	V <sub>CC</sub>	—	3.4	6.0	Volts	
Reference Voltage	V <sub>REF</sub>	—	2.85	2.95	Volts	
Case Temperature <sup>(2)</sup>	Operating	T <sub>C</sub>	-30	25	+110	°C
	Storage	T <sub>STG</sub>	-55	—	+125	

<sup>(1)</sup> No damage assuming only one parameter is set at limit at a time with all other parameters set at nominal value.  
<sup>(2)</sup> Case Operating Temperature (T<sub>C</sub>) refers to the temperature of the GROUND PAD at the underside of the package.

**Table 2. Recommended Operating Conditions**

Parameter	Symbol	Minimum	Nominal	Maximum	Unit
Power Output	P <sub>O</sub>	—	—	28.0	dBm
Operating Frequency	F <sub>O</sub>	1920.0	1950.0	1980.0	MHz
Supply Voltage	V <sub>CC</sub>	3.2	3.4	4.2	Volts
Reference Voltage	V <sub>REF</sub>	2.75	2.85	2.95	Volts
Case Operating Temperature	T <sub>C</sub>	-30	+25	+85	°C

**Table 3. Power Range Truth Table**

Power Setting	V <sub>REF</sub>	Output Power
Power On	2.85 V	28 dBm
Shut Down	0.0 V	—

**Table 4. Electrical Specifications for WCDMA Nominal Operating Conditions <sup>(1)</sup>**

Characteristics	Symbol	Condition	Minimum	Typical	Maximum	Unit	
Gain conditions	GLOW	P <sub>0</sub> = 0 dBm	—	23	—	dB	
	GMID	P <sub>0</sub> = 16 dBm	—	26	—		
	GHIGH	P <sub>0</sub> = 28 dBm	—	28	—		
Power Added Efficiency	PAE <sub>LOW</sub>	P <sub>0</sub> = 0 dBm	—	0.8	—	%	
	PAE <sub>HIGH</sub>	P <sub>0</sub> = 28 dBm	—	41.0	—		
Total Supply current	I <sub>CC_LOW</sub>	P <sub>0</sub> = 0 dBm	—	35	—	mA	
	I <sub>CC_HIGH</sub>	P <sub>0</sub> = 28 dBm	—	450	—		
Quiescent current	I <sub>Q</sub>	No RF In	—	25	—	mA	
Reference Current	I <sub>REF</sub>	—	—	1	—	mA	
Total Supply current in Power-down Mode	I <sub>PD</sub>	V <sub>CC</sub> = 3.4 V V <sub>REF</sub> = 0 V	—	3	—	μA	
Adjacent Channel Power <sup>(2)</sup>	5 MHz offset	ACP5	P <sub>0</sub> = 0 dBm P <sub>0</sub> = 28 dBm	— —	-45 -41	— —	dBc
	10 MHz offset	ACP10	P <sub>0</sub> = 0 dBm P <sub>0</sub> = 28 dBm	— —	-60 -52	— —	
Harmonic Suppression	Second	f <sub>02</sub>	—	—	34.5	—	dBc
	Third	f <sub>03</sub>	—	—	50.0	—	
Noise Power in RX Band 2110-2170 MHz	RxBN	P <sub>0</sub> ≤ 28 dBm	—	-141	—	dBm/Hz	
Noise Figure	NF	—	—	4	—	dB	
Input Voltage Standing Wave Ratio (VSWR)	VSWR	—	—	1.5:1	—	—	
Stability (Spurious output)	S	5:1 VSWR All phases	—	—	-70	dBc	
Ruggedness <sup>(3)</sup>	Ru	P <sub>0</sub> ≤ 28 dBm	10:1	—	—	VSWR	

<sup>(1)</sup> Unless specified otherwise: V<sub>CC</sub> = +3.4 V, V<sub>REF</sub> = +2.85 V, Temp = +25 °C, Freq. = 1950 MHz.

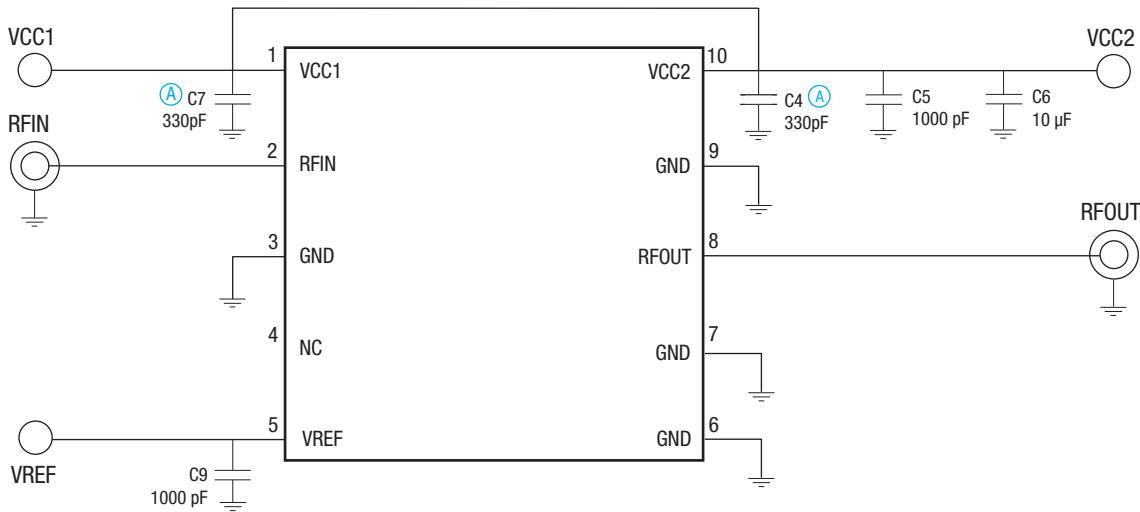

<sup>(2)</sup> ACP is expressed as a ratio of total adjacent power to WCDMA modulated in-band, both measured in 3.84 MHz bandwidth at specified offsets.

<sup>(3)</sup> All phases, time = 10 seconds.

### Evaluation Board Description

The evaluation board is a platform for testing and interfacing design circuitry. To accommodate the interface testing of the SKY77171, the evaluation board schematic and diagram are

included for preliminary analysis and design. Figure 2 shows the basic schematic of the board for the 1920 MHz to 1980 MHz range and Figure 3 is the assembly diagram.

(A) Place caps at closest proximity to PA module with the capacitor grounds directly connected to the PAM grounds.

### Package Dimensions and Pad Descriptions

The SKY77171 is a multi-layer laminate base, overmold encapsulated modular package designed for surface mount solder attachment to a printed circuit board. Figure 4 is a mechanical drawing of the pad layout for this package. Figure 6 shows each

pad function and the pad numbering convention, which starts with pad 1 in the upper left and increments counter-clockwise around the package. Figure 7 illustrates typical case markings.

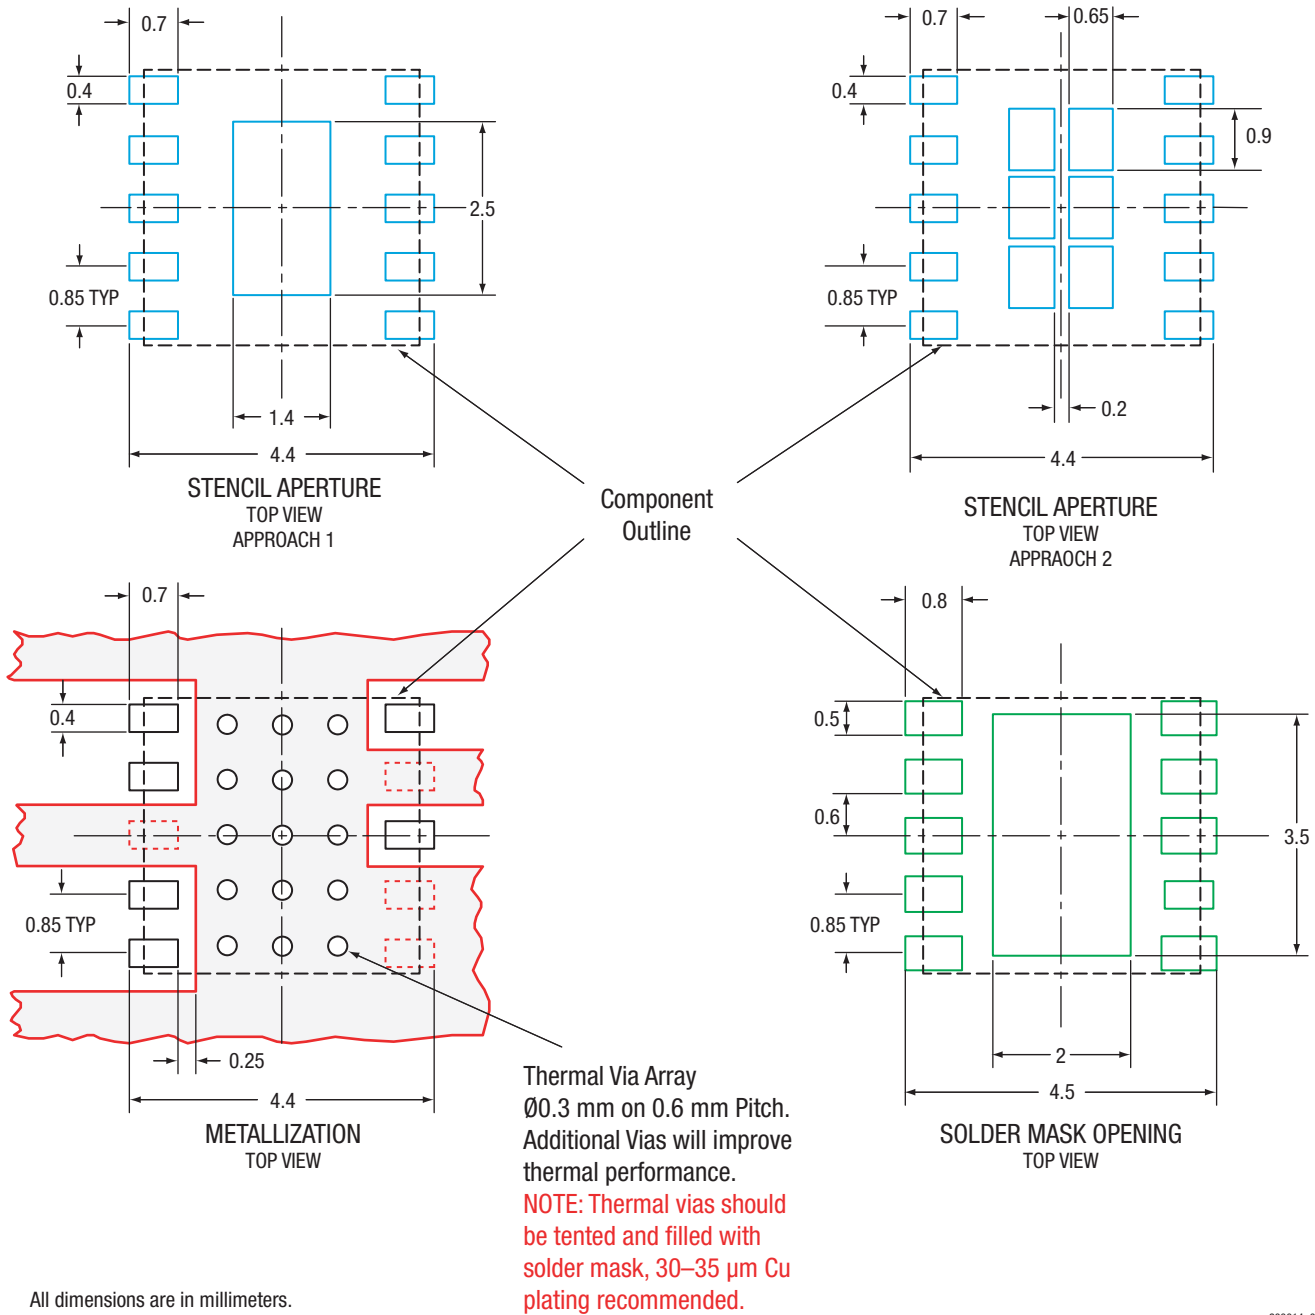

**NOTES:** Unless otherwise specified

1. ALL DIMENSIONS ARE IN MILLIMETERS.
2. DIMENSIONING AND TOLERANCING IN ACCORDANCE WITH ASME Y14.5M-1994.
3. SEE APPLICABLE BONDING DIAGRAM AND DEVICE ASSEMBLY DRAWING FOR DIE AND COMPONENT PLACEMENT.
4. PADS ARE METAL DEFINED; THE CENTER PAD IS SOLDER MASK DEFINED.

**Package and Handling Information**

Because of its sensitivity to moisture absorption, this device package is baked and vacuum-packed prior to shipment. Instructions on the shipping container label must be followed regarding exposure to moisture after the container seal is broken, otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY77171 is capable of withstanding an MSL3/250 °C solder reflow. Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. If the part is attached in a reflow oven, the temperature ramp rate should not exceed 3 °C per second; maximum temperature should not exceed 250 °C. If the part is manually attached, precaution should be taken to insure that the part is not subjected to temperatures exceeding 250 °C for more than 10 seconds. For

details on attachment techniques, precautions, and handling procedures recommended by Skyworks, please refer to Skyworks Application Note: *PCB Design and SMT Assembly/Rework*, Document Number 101752. Additional information on standard SMT reflow profiles can also be found in the *JEDEC Standard J-STD-020B*.

Production quantities of this product are shipped in the standard tape-and-reel format. For packaging details, refer to Skyworks Application Note: *Tape and Reel Information – RF Modules*, Document Number 101568.

**Electrostatic Discharge Sensitivity**

The SKY77171 is a Class 2 device. Figure 8 lists the Electrostatic Discharge (ESD) immunity level for each non-ground pad of the SKY77171 product. The numbers in Figure 8 specify the ESD threshold level for each pad where the I-V curve between the pad and ground starts to show degradation.

The ESD testing was performed in compliance with MIL-STD-883E Method 3015.7 using the Human Body Model. If ESD damage threshold magnitude is found to consistently exceed 2000 volts on a given pad, this so is indicated. If ESD damage threshold below 2000 volts is measured for either polarity, numbers are indicated that represent worst case values observed in product characterization.

Various failure criteria can be utilized when performing ESD testing. Many vendors employ relaxed ESD failure standards, which fail devices only after “the pad fails the electrical specification limits” or “the pad becomes completely non-functional”. Skyworks employs most stringent criteria and fails devices as soon as the pad begins to show any degradation on a curve tracer.

To avoid ESD damage, both latent and visible, it is very important that the product assembly and test areas follow the Class-1 ESD handling precautions listed in Table 5.

Pad layout as seen from top view looking through package.
