CERAMIC RESONATORS

General Description	2-7
KBR -Y Series - Surface Mountable — f_0 : 380 to 1050 kHz	8-9
KBR -B, -BK, -F Series — f_0 : 190 to 1050 kHz	10-11
KBR Special Series	12
PBRC -A Series - Surface Mountable — f_0 : 2.00 to 8.00 MHz	13
PBRC -B/D Series - Surface Mountable — f_0 : 2.00 to 36.00 MHz	14
Tape & Reel Packaging, PBRC-A/B/D	15
SSR-B Series	16
KBR -M, -MS, -MSA, -MSB Series — f_0 : 2.00 to 13.00 MHz	17
KBR -MY, MSA Series — f_0 : 13.01 to 36.00 MHz	18
KBR -MKC, -MKD, -MKS Series — f_0 : 3.45 to 8.00 MHz and 16.00 to 36.00 MHz	19
Tape & Reel Packaging, MHz Ceramic Resonators	20

SURFACE ACOUSTIC WAVE RESONATORS

General Description	21
PAR Series	22
KAR -CS, -CT, -CB, -CD, -CK Series — f_0 : 46 to 315 MHz	23-24
KAR Series Data	25

QUARTZ CRYSTALS

KSX Series	26
KT Series	27

CLOCK OSCILLATORS

General Description	28-30
K50 Series — f_0 : 8 to 68 MHz	31-34
KT11 Series	35
KT12 Series	36
KT14 Series	37
VCO Series	38-42
KXO-01 Series — f_0 : 8.0 to 50 MHz	43-44
KXO-HC/KHO-HC Series — f_0 : 1.0 to 80 MHz	45-46
386 Series	47-48

AVX/Kyocera Ceramic Resonators

KHz BAND CERAMIC RESONATORS

Part Series	Frequency Range	Type	Lead Configuration
KBR-Y	380 to 1050 kHz	SMT	Gull Wing Surface Mount
KBR-B	190 to 680 kHz	Std Q_m	Standard, Single-in-line, Formed Leads
KBR-BK	380 to 655 kHz	Std Q_m	Standard, Single-in-line
KBR-F	795 to 1050 kHz	High Q_m	Standard, Single-in-line
Specials	Per application	—	—

MHz BAND CERAMIC RESONATORS

Part Series	Frequency Range*	Type
PBRC-A	2.00 to 8.00 MHz	SMT without Capacitor
PBRC-B/D	2.00 to 36.00 MHz	SMT with Built-in Capacitor
SSR-B	16.00 to 60.00 MHz	Ultraminiature SMT with Built-in Capacitor
KBR-MS	2.00 to 3.57 MHz	Standard
KBR-MSA	3.58 to 8.00 MHz	Water resistant
KBR-MSB	3.58 to 6.00 MHz	“No-Clean” Process only
KBR-M	6.01 to 13.00 MHz	Standard
KBR-MY	13.01 to 16.00 MHz	CMOS
KBR-MSA	16.00 to 36.00 MHz	High Frequency Standard
KBR-MKS	3.58 to 8.00 MHz	Built-in Capacitor –Low Profile
KBR-MKC	3.58 to 8.00 MHz	Built-in Capacitor -“No-Clean” Process only
KBR-MKD	3.58 to 8.00 MHz, 16.00 to 36 MHz	Built-in Capacitor-Water resistant

*For additional frequencies consult factory.

GENERAL DESCRIPTION

AVX/Kyocera produces a broad range of high quality ceramic resonators covering both the kilohertz and megahertz frequency ranges. The high quality and extensive coverage of this product line allows optimum design of almost any oscillating circuit.

Ceramic resonators stand between quartz crystal oscillators and LC/RC oscillators in regard to accuracy but are considerably smaller, require no adjustments, have improved start-up times, and are low in cost.

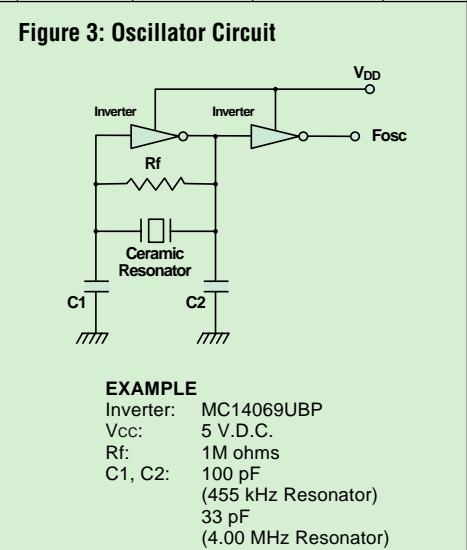

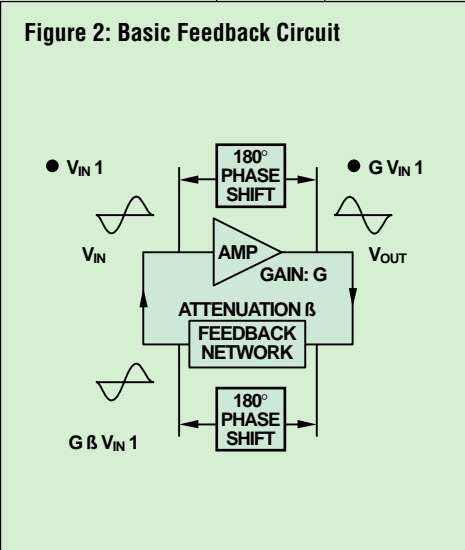

Their oscillation is dependent upon mechanical resonance associated with their piezoelectric crystalline structure. These materials (usually barium titanate or lead-zirconium titanate, PZT) have large dipole movement which causes the distortion or growth of the crystal by an applied

electric field. The resonance frequency depends on the vibration mode as shown in Figure 1.

A basic feedback circuit is shown in Figure 2. It consists of an amplifier with a 180° phase shift and attenuator. A negative polar output (volt) is obtained with an amplitude equal to the gain of the amplifier times the input voltage ($G \times V_{IN}$). After the signal goes through the feedback network with an attenuation ratio of β , a negative polar wave equal to $\beta \times (G \times V_{IN})$ is fed back to the input. If this feedback is greater than the initial input voltage (V_{IN}), oscillation will occur. This satisfies the two conditions necessary for oscillation:

1. $G \times \beta > 1$
2. Phase cycle around the loop is an integral multiple of 360°.

Table I Oscillators and Resonator Frequency Application		Table II Timing Devices											
		(Hz)	10k	20k	100k	200k	1M	2M	10M	20M	100M	200M	1G

Quartz Crystal		±0.002%	±1ppm/°C	Next to Largest	High								

AVX/Kyocera Ceramic Resonators

GENERAL DESCRIPTION continued

The mechanical vibration of a ceramic resonator can be represented by an equivalent electrical circuit consisting of L, C, and R's (Figure 4). The impedance and phase curves of a ceramic resonator are shown in Figure 5.

Between the resonant frequency (f_r) and the anti-resonant frequency (f_a), the ceramic resonator acts like an inductor with performance identical to a coil and a resistor (Figure 4-B). At other frequencies, it has capacitive characteristics (Figure 4-A).

The equivalent circuit parameters can be determined from the resonant and anti-resonant frequencies. These equations are shown in Table III with the equivalent circuit parameters of typical AVX/Kyocera resonators shown in Table IV.

Ceramic resonators have much lower Q_m and higher equivalent capacitances than crystal oscillators. Oscillation circuits of various I.C.'s can be either low (inverter) or high (Schmidt) gain.

**Figure 4:
Electrical Equivalent Circuit**

A. $f = f_r$

B. $f_r \leq f \leq f_a$

**Figure 5:
Impedance and Phase Charts**

Table III: Equivalent Circuit Equations

$$f_r = \frac{1}{2\pi\sqrt{L_0 C_0}}$$

$$f_a = \frac{1}{2\pi\sqrt{L_0 C_0 C_1 / (C_0 + C_1)}}$$

$$f_a = f_r \sqrt{1 + \left(\frac{C_0}{C_1}\right)}$$

$$Q_m = \frac{1}{2\pi f_r R_0 C}$$

$$L_0 = \frac{1}{4\pi^2 f_r^2 C \left[1 - \left(\frac{f_r}{f_a}\right)^2\right]}$$

$$C_0 = C \left[1 - \left(\frac{f_r}{f_a}\right)^2\right]$$

where $C = C_0 + C_1$

$$Q_m = \frac{1}{2\pi f_r R_0 C \left[1 - \left(\frac{f_r}{f_a}\right)^2\right]}$$

Table IV: Typical Parameters of the Equivalent Circuit

	KBR-4.00MSA/MSB	KBR-455(BK)
R_0	8Ω	6Ω
L_0	318μH	3.2mH
C_0	5.4pF	43pF
C_1	42pF	360pF
Q_M	970	1600

APPLICATION AND TEST CIRCUITS

In some circuits, a feedback resistor (R_f , Figure 1) is required to allow oscillation to start when the power is initially applied. Its value is generally 1 M Ω in ceramic resonator circuits.

Special attention should be paid to the design of oscillator circuits, because they have a significant impact on the performance of the system. To determine proper circuit parameters, careful consideration must be given

to each component's characteristics under normal and marginal working conditions. Recommended component values for various IC's and microprocessors are given in the Appendix "Application Circuits for Ceramic Resonators." These values should be checked in the actual operating circuit to confirm their performance over changing conditions of input voltage and temperature.

4 Bit Microprocessor Clock

Figure 4:
Test Circuit Spurious Response

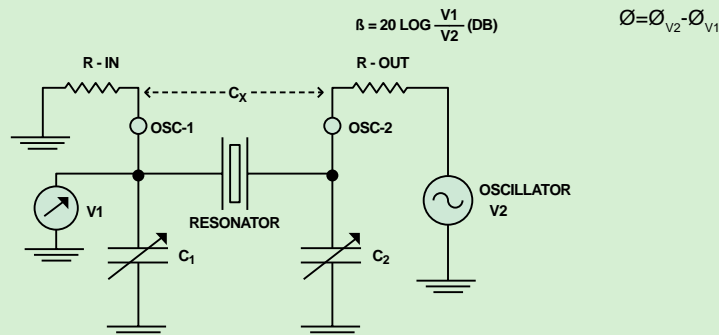

Figure 5:
Simulation Circuit

APPLICATION AND TEST CIRCUITS continued

The design of an oscillation circuit requires an accurate choice of circuit components to ensure oscillation within the specific voltage range of the IC (Figure 6). Semiconductor manufacturers' data books categorize V_H and V_L for both input and output requirements. The next stage of a design can be driven from either the IC input or output. Special attention should be paid to V_{IH} and V_{IL} or V_{OH} and V_{OL} depending upon where the next stage comes from the IC.

Oscillation frequency and amplitude depend upon the values of the external load capacitors (C_1 , C_2). These

effects are illustrated in Figures 7, 8 and 9. When the feedback ratio and the input oscillation amplitude are decreased too far, the circuit becomes vulnerable to external noise and might oscillate spuriously with the external noise.

There are some cases when a high gain IC or one with a wide non-linear range will give abnormal oscillation from sub-vibration of the resonator. This can be prevented by adding a damping resistor to decrease the feedback ratio or by increasing the load capacitance values. The spurious characteristics of typical AVX/Kyocera kHz and MHz resonators are shown in Figures 10 and 11.

KBR -Y Series Surface Mountable Ceramic Resonators

kHz Band SMT Formed Leads Ceramic Resonators

f_0 : 380 to 1050 kHz

FEATURES

- 1) Reflow solderable
- 2) Washable
- 3) Surface mountable
- 4) 1000 pcs. per reel
- 5) Sold in increments of 2000 pcs.

KBR -B, -BK, -F Series Ceramic Resonators

kHz Band Ceramic Resonators

f_o : 190 to 1050 kHz

FEATURES

- 1) Optimum selection of oscillation parameters possible according to application
- 2) Highly reliable design with excellent environmental resistance
- 3) Standard frequency range of 190 kHz to 1050 kHz
- 4) Formed lead type also standardized for use in low profile devices
- 5) Packaged in bags of 500 pcs.
- 6) Sold in increments of 2000 pcs.

APPLICATION CIRCUITS

PBRC -A Series Chip Resonators

MHz Band SMT Resonators

f_0 : 2.00 to 8.00 MHz

FEATURES

- 1) High reliability chip resonator in a ceramic case which can be reflow soldered and washed
- 2) Ultra-miniature size is suitable for compact equipment and high mounting density
- 3) Rectangular shape allows easy "pick and place" operation
- 4) 2000 pcs. per reel
- 5) Sold in increments of 2000 pcs.

PBRC -B, -D Series Chip Resonators

Built-in Capacitor MHz Band SMT Resonators

f_o : 2.00 to 36.00 MHz

FEATURES

- 1) Built-in load capacitor
- 2) High reliability chip resonator in a ceramic case which can be reflow soldered and washed
- 3) Ultra-miniature size is suitable for compact equipment and high mounting density
- 4) Rectangular shape allows easy "pick and place" operation
- 5) 2000 pcs. per reel
- 6) Sold in increments of 2000 pcs.

HOW TO ORDER

PBRC - 4.00 B R

- ① Type: (Piezo Bulk Resonator Chip)
- ② Oscillation frequency (MHz)
- ③ Resonator type:
B = With capacitor (2.00~20.00MHz)
D = With capacitor (20.01~36.00MHz)
- ④ Packaging:
R = Tape and reel
- ⑤ Frequency tolerance:
□ = ±0.5% (2.00~8.00MHz)
07 = ±0.7% (8.01~20.00MHz)
□ = ±0.5% (20.01~36.00MHz)

STRUCTURE

Surface Acoustic Wave Resonators

GENERAL DESCRIPTION

The fundamental wave oscillation of AVX/Kyocera Surface Acoustic Wave (SAW) Resonators eliminates spurious response, which leads to a reduction in the number of components used for spurious frequency suppression. This feature, in addition to the good shock resistance characteristics of the SAW resonator, helps to simplify the assembly process and promotes higher stability.

Kyocera Surface Acoustic Wave (SAW) resonators are ideal for use in RF modulators for videotape recorders, video discs and cable television. These unique SAW resonators contain two channels in one package. Custom design features can be manufactured for specific applications.

GENERAL DESCRIPTION

Clock oscillators are devices which generate the pulses to control the timing and operation of logic circuitry. They differ from other components used to control the timing of logic circuits, such as quartz crystals and ceramic resonators, in that clock oscillators need a power supply but no additional external circuitry to operate. Clock oscillators are usually made by combining in a single package a frequency control device such as a quartz crystal, and a hybrid circuit of resistors, capacitors, and either transistors or an integrated circuit. The package is often either a welded steel can or ceramic package hermetically sealed which protects the crystal and electronics from environmental effects and also reduces the unwanted electromagnetic and radio-frequency emissions which oscillators can generate.

OSCILLATION DEVICES

Various types of circuits can be used to generate timing waveforms for electronic devices. The simplest of these is a simple circuit using capacitors, inductors and an active element such as a transistor or operational amplifier. This is an easy, low cost solution but the frequency is not very stable due to temperature and individual component variations. A more stable circuit would utilize a ceramic resonator, which has the advantage of better frequency tolerance, but resonators are only available in certain frequency ranges and stability of $\pm 0.5\%$ is the best that can be achieved. If better frequency stability is needed, then the most popular method is to use a circuit which relies on the piezoelectric properties of quartz crystals to stabilize the oscillation.

If an alternating electrical field is applied to a cut and polished quartz crystal, the crystal lattice will deform due

to what is called the piezoelectric effect. At one particular frequency, which is determined by the geometry and size of the crystal, vibration will occur much more easily than at any other frequency. This is called the “resonant” frequency. If an oscillation circuit is built around this crystal, the mechanical vibrations can be used to control the electrical oscillations very precisely.

AVX/Kyocera builds its high quality clock oscillators from the substrate up. The whole module is hermetically sealed into an all-metal welded package to protect it from humidity. The case is directly grounded into a pin to help minimize RF radiation and meet FCC’s EMI specifications.

A full range of clock oscillators are manufactured by AVX/Kyocera. These extend from 1 MHz up to 72 MHz and include TTL and HCMOS compatible drive levels. AVX/Kyocera also offers special low power consumption clocks for long life battery applications. (See chart page 28.) Application specific designs for critical requirements of today’s high-speed, 32-bit microprocessors are available.

WAVEFORM

The diagram below shows a typical waveform of a clock oscillator with an explanation of the parameters important for correct selection of the appropriate device.

Often called the symmetry of a waveform, duty cycle is a measure of how close to being equal the high and low parts of a waveform are. A perfectly symmetrical waveform will have duty cycle of 50%. We usually specify the minimum and maximum variations of the duty cycle as, for example: 60/40%. This is computed from the times shown on the diagram below as $A/A+B$.

Series	Output Frequency (MHz)	Fan Out	Output Level		Features
			V _{OH} Min	V _{OL} Max

AVX/Kyocera Clock Oscillators

GENERAL DESCRIPTION continued

CLOCK OSCILLATOR APPLICATIONS

In a typical personal computer system 5 or 6 clock oscillators may be used in the main processing unit, for all the add-on boards, video graphics adapters, co-processors, etc., and all the peripheral devices such as printers, modems and networking equipment. Many different companies may be involved in the manufacture of all these individual parts of the system.

The telecommunications industry uses clock oscillators in fax machines, cellular phones, pagers, and radio systems. These oscillators are typically very high precision, temperature compensated and voltage controlled devices.

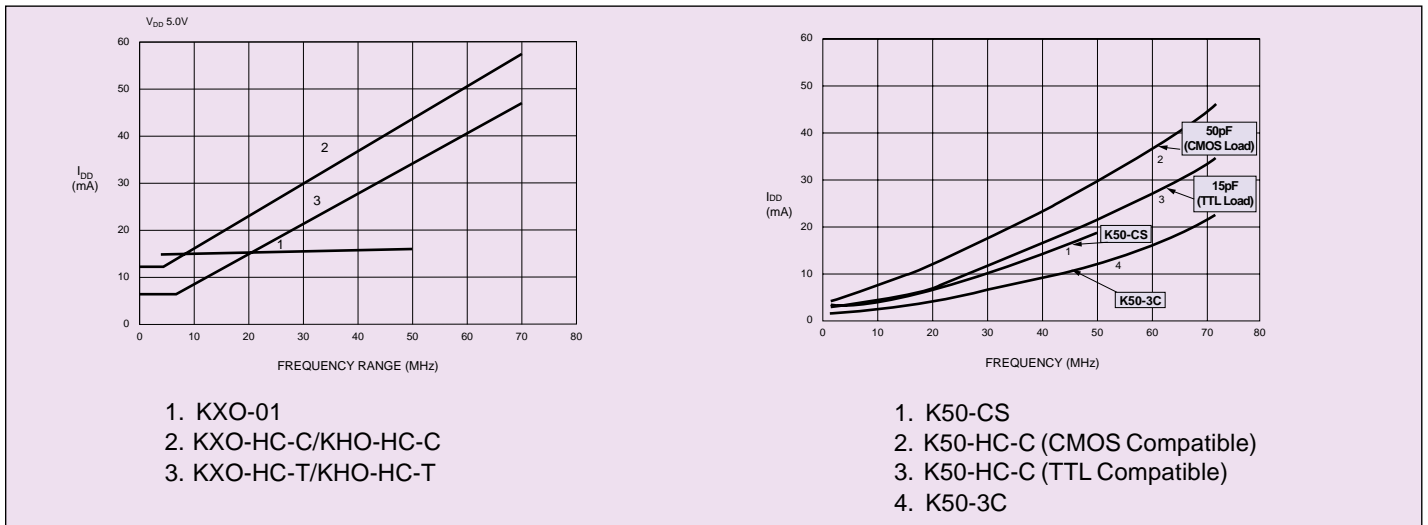

Clock oscillators are manufactured by combining a quartz crystal into a hybrid module containing passive components and active digital devices.

AVX/Kyocera builds its high quality clock oscillators from the substrate up. The whole module is hermetically sealed into an all-metal welded package to protect it from humidity. The case is directly grounded to a pin to help minimize RF radiation and meet FCC's EMI specifications.

PACKAGING

The diagrams below show the basic design of the 14 pin and 8 pin DIP (dual inline packages) and ceramic SMT packages in which most of the clock oscillators are available. Leaded oscillators are tube packaged. SMT K50 units are tape and reel packaged 1000 units per reel. Tube packages hold 25 units each for the KXO-01 and KXO-HC series, and 40 units each for the KHO-HC series products.

FREQUENCY vs. POWER SUPPLY CURRENT

OUTPUT WAVEFORM

CLOCK OSCILLATOR GENERAL CONSTRUCTION

PACKAGES

AVX/Kyocera Crystal Clock Oscillators

MECHANICAL

Readings to be made one hour after completion of test.

Shock Resistance - Drop module onto a hard wooden surface from a height of 50cm, three times. Unit must meet initial electrical requirements after test.

Vibration Resistance - Vibrations with an amplitude of 1.5mm and a sweep between 10 and 55Hz of 1 minute shall be applied for 2 hours in each of the X, Y, and Z axes for a total test time of 6 hours. Unit must meet initial electrical requirements after test.

Pin Pull and Bend - A load of 1kg shall be applied for 30 seconds in the direction of each pin. The pin will withstand without damage a bend from its base of 90° in one direction twice. Unit must meet initial electrical requirements after test.

Solvent Resistance - After immersion in Freon TF, Freon TE or IPA Liquid, at 25±5°C for a period of 10 minutes, unit shall meet initial electrical requirements.

Ultrasonic Resistance - Unit shall withstand ultrasonic washing at 28 to 31kHz and 300 watts per 20 liters of fluid in either Freon TF, Freon TE or IPA for up to 30 seconds without damage.

ENVIRONMENTAL

Readings to be made two hours after completion of test.

Soldering Heat - Immerse pin to within 1mm of the glass stand-off in a solder bath of 280±10°C for 10 seconds. Unit shall meet initial electrical requirements after test.

Heat Resistance - After exposure to +85°C for 500 hours, frequency change shall be within ±10ppm of initial value.

Cold Resistance - After exposure to -40°C for 500 hours, unit must meet initial electrical requirements.

Humidity Resistance - After exposure to +85°C and 85% RH for 500 hours, unit must meet initial electrical requirements and show no significant rusting.

Thermal Shock - After 15 cycles of immersions in baths of 100°C and 0°C for 5 minutes with transfer times within 10 seconds, units will meet initial electrical requirements.

Hermeticity - Helium leak detector test should be performed under 5×10^{-7} atm, and measured after application of 10kg/sq cm of pressure for three hours and exposure to air for 30 minutes. No air bubbles shall be found when immersed in 75°C water for 5 minutes.

AVX/Kyocera Crystal Clock Oscillator

K50-HC-C Series Miniature SMT Crystal Clock Oscillators

HCMOS Compatible

f_o : 8 to 68 MHz

Features:

- 1) Miniature SMT ceramic package
- 2) Frequency: 8~68MHz
- 3) Stability: 100ppm, 50ppm
- 4) Load: 50pF maximum
- 5) Tristate output inhibit
- 6) Hermetically sealed package
- 7) 1000 pieces per reel
- 8) Sold in increments of 1000 pieces

How to Order

K50-HC 1 CS E 40.0000M R

- ① ② ③ ④ ⑤ ⑥

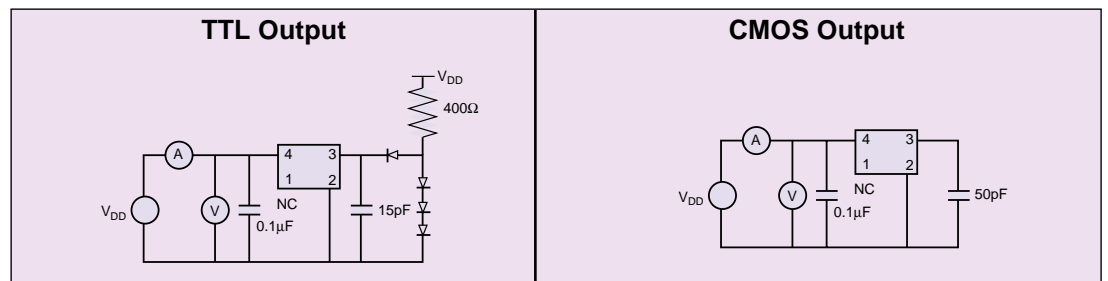

- ① Type: (K50-HC series)
- ② Stability: 1-100ppm, 0-50ppm
- ③ Output compatibility:
CS = CMOS 45/55 duty cycle @ 50% V_{DD}
CS = TTL 40/60 duty cycle @ 1.4 volts
- ④ Tristate output: E with function
- ⑤ Frequency (MHz)
- ⑥ Packaging: R=Tape and reel

Pulling Stability	±1.5	MHz	VSWR=2 All Phase
Spurious Level	-10	dBc	Reference is fundamental
Operating Temp Range	-10 ~ 60	°C	—

*Covering frequency range is between 700MHz ~ 1600MHz

DIMENSIONS and PAD CONNECTION

RECOMMENDED LAND PATTERN

Voltage Control Oscillator

RK Series - Surface Mount

f_o : 1.3 to 2.0 GHz

FEATURES

- 1) Ultraminiature size based on low temperature co-firable laminated substrate technology
- 2) Printed conductive line on inner layer contributes to ultra high density mounting
- 3) Reflow soldering available
- 4) 2000 pieces per reel
- 5) Sold in increments of 2000 pieces

HOW TO ORDER

RK - 405 R 1668 A1 W

- ① ② ③ ④ ⑤ ⑥
- ① Series: RK=1300~2000MHz
 - ② Dimensions
 - ③ Applications: R=RX
 - ④ Frequency: 1668=1668Mhz
 - ⑤ Individual specification
 - ⑥ Packaging: W=Tape and reel

ELECTRICAL CHARACTERISTICS

Type		Frequency (MHz)	Part No.	Specifications (Ta=25°C)						
System	Module			Vcc (V)	Icc (mA)	Po (dBm)	f _{tu} (MHz/V)	C/N		Top (°C)
								Min	Typ	
PHS	RX	1647 ~ 1669	RK-405R1658	3.0 ±0.15	6.5 max.	-1±3	24±5 V _t =0.5 ~ 2.5V	123 min (600kHz off)	128	-20°C ~ +60°C
PHS	RX	1651 ~ 1685	RK-405R1668	3.0 ±0.15	6.5 max.	-1±3	31±6 V _t =0.5 ~ 2.5V	123 min. (600kHz off)	127	-20°C ~ +60°C

Vcc: Power supply, Icc: current consumption, Po: Output level, f_{tu}: tuning voltage sensitivity, Top: Operation temperature

TAPE DIMENSIONS

Part No.	Specifications		
	Tape width, guide pitch	Diameter of Reel	Unit
VK-120		Ø 330	2000pcs
EK-304		Ø 330	2000pcs
YK-501		Ø 330	2000pcs
RK-405		Ø 330	2000pcs

REEL DIMENSIONS

KXO-01 Series Crystal Clock Oscillators

TTL Drive - TTL Compatible

f_o : 8.0 to 50 MHz

FEATURES

- 1) Lower Cost
- 2) 14 pin DIP compatible
- 3) Wide frequency range (8MHz - 50MHz)
- 4) All metal package minimizes RF radiation
- 5) Meets FCC EMI specifications
- 6) Solder coated pins
- 7) 25 pieces per tube
- 8) Sold in increments of 100 pieces

HOW TO ORDER

KXO-01 - 1 - 32.0000M T

① ② ③ ④

- ① Type: (Kyocera Crystal Oscillators)
- ② Frequency precision:
0 = ± 50 ppm (special)
1 = ± 100 ppm
- ③ Frequency
- ④ Packaging: T = Tube

SPECIFICATIONS (KXO-01)

Parameters		Code	Rating	Unit	Remarks
Output Frequency		f_{out}	8 to 50	MHz	
Frequency Precision		$\Delta f/f_o$	0: ± 50	ppm	0 to 70°C
			1: ± 100	ppm	4.5V to 5.5V
Aging Rate		$\Delta f/f$	± 5	ppm/y	
Operating Temperature Range		T_{opr}	0 to ± 70	°C	
Storage Temperature Range			-55 to +125	°C	
Voltage		V_{DD}	5 ± 0.5	VDC	
Electrical Current Consumption		I_{DD}	35 max	mA	
Output	Duty Ratio	S_y	40 to 60	%	1.4V DC level
	"0" Level	V_{OL}	0.4 max	V	At $I_{OL}=16$ mA
	"1" Level	V_{OH}	2.4 min	V	At $I_{OH}=400\mu A$

KXO-HC/KHO-HC Series Crystal Clock Oscillators

HCMOS Drive - TTL or CMOS Compatible

f_o : 1 to 72 MHz

FEATURES

- 1) High speed CMOS clock oscillator
- 2) High power drive level
- 3) Low current consumption
- 4) Output available with TTL or CMOS compatibility
- 5) Enable/disable option
- 6) KHO-HC: 8 pin DIP
- 7) KXO-HC: 14 pin DIP
- 8) KXO: 25 pieces per tube
KHO: 40 pieces per tube
- 9) KXO: Sold in increments of 100 pieces
KHO: Sold in increments of 120 pieces

HOW TO ORDER

DIMENSIONS

386 Series Clock Oscillators

HCMOS Drive - CMOS Compatible

f_o : 24, 32, 40, 50 MHz

FEATURES

- 1) Capable of driving the 80386 and surrounding LSI directly up to 150pF load
- 2) Replaces existing clock generator and/or buffer
- 3) 45/55 symmetry for all standard frequencies even at 150pF load
- 4) Enable/disable function as standard
- 5) 25 pieces per tube
- 6) Sold in increments of 100 pieces

HOW TO ORDER
