

IGBT Ignition Predriver with Dynamic Current Regulation

Description

The CS8312 is a bipolar microprocessor interface IC designed to drive an IGBT (or logic level MOSFETs) powering large inductive loads in harsh operating environments. The IC's dynamic current limit function lets the microprocessor adjust the current limit threshold to the real time needs of the system.

CLI, the current limit input, sets the current limit for the IGBT high or low as directed by the system microprocessor. CLI also raises and lowers the threshold on the diagnostic FLAG output signal. The FLAG output signals the microprocessor when the current level approaches current limit on the IGBT. The CTRL input enables the FLAG function.

Features

- μ P Compatible Inputs
- Adjustable Current Limit Thresholds
- External Sense Resistor
- Flag Signal to Indicate Output Status

Absolute Maximum Ratings

| | |
|--|-------------------------------------|
| Supply Voltage..... | -0.3V to +12V |
| Digital Input Currents..... | 2mA |
| Internal Power Dissipation (T _A = 25°C) | 700mW |
| Junction Temperature Range..... | -40°C to +150°C |
| Storage Temperature Range | -55°C to +165°C |
| Lead Temperature Soldering | |
| Wave Solder(through hole styles only)..... | 10 sec. max, 260°C peak |
| Reflow (SMD styles only)..... | 60 sec. max above 183°C, 230°C peak |
| Electrostatic Discharge (Human Body Model) | 2kV |

Package Pin Description

| PACKAGE PIN # | PIN SYMBOL | FUNCTION |
|-------------------------|------------|---|
| 8L PDIP & SO | | |
| 1 | FLAG | Indicates whether current through the IGBT has reached a pre-set level. |
| 2 | SENSE+ | Positive input to current comparator. |
| 3 | SENSE- | Ground (SENSE-) for current sense resistor. |
| 4 | Gnd | Ground connection. |
| 5 | OUT | Output voltage to IGBT (MOSFET) gate. |
| 6 | CLI | Current limit input increase. |
| 7 | CTRL | Control input. |
| 8 | V_{CC} | Supply voltage. |

Circuit Description

Flag Function (see Application Diagram)

The flag indicates when the voltage across the two sense pins is approaching a current limit level that has been determined by the value of the external sense resistor (R_{SENSE}) and the state of the CTRL and CLI pins. If the voltage across the sense pins (SENSE+, SENSE-) is less than the flag turn-on voltage, then the FLAG is off. When the voltage between the sense pins equals the FLAG turn on voltage, the FLAG will latch on until the CTRL pin goes low. FLAG is disabled whenever CTRL is low. Changing the CLI pin from low to high will increase nominal FLAG turn on voltage by approximately 45%.

Table 1 FLAG Timing Sequence

| State | CONTROL | SENSE+ | FLAG |
|-------|---------|-----------------|------|
| 0 | Low | X | OFF |
| 1 | High | Below Threshold | OFF |
| 2 | High | Above Threshold | ON |
| 3 | High | X | ON |
| 0 | Low | X | OFF |

Output Stage

The CS8312 output (OUT) saturates and supplies voltage to the IGBT (or MOSFET) gate once the CTRL switches from low to high. As current through the IGBT (MOSFET) increases and the voltage across the sense resistor passes the flag turn on voltage, the FLAG will turn on. If the current through the sense resistor continues to rise and the sense resistor voltage reaches the regulation sense voltage, then the gate voltage will fall to a level that regulates the driver and maintains the regulation sense voltage at the sense resistor.

Current Limit Function

Changing the CLI pin from a logic low to a logic high increases the FLAG turn on voltage by approximately 45% and the regulation sense voltage by approximately 39% respectively.

Package Specification

PACKAGE DIMENSIONS IN mm (INCHES)

| Lead Count | D | | | |
|------------------|--------|------|---------|------|
| | Metric | | English | |
| | Max | Min | Max | Min |
| 8 Lead SO Narrow | 5.00 | 4.80 | .197 | .189 |
| 8 Lead PDIP | 10.16 | 9.02 | .400 | .355 |

PACKAGE THERMAL DATA

| Thermal Data | | 8L SO | 8L PDIP | |
|-----------------|-----|-------|---------|------|
| $R_{\theta JC}$ | typ | 45 | 52 | °C/W |
| $R_{\theta JA}$ | typ | 165 | 100 | °C/W |

Surface Mount Narrow Body (D); 150 mil wide

REF: JEDEC MS-012

Plastic DIP (N); 300 mil wide

REF: JEDEC MS-001

Ordering Information

| Part Number | Description |
|-------------|----------------------------|
| CS8312YN8 | 8L PDIP |
| CS8312YD8 | 8L SO Narrow |
| CS8312YDR8 | 8L SO Narrow (tape & reel) |
