

Reflective Object Sensor

OPB609 Series

Features:

- OPB609 emitter (940 nm IR-LED)
- Unfocused for sensing diffuse surface
- Low-cost plastic housing
- High-speed phototransistor output

Description:

The **OPB609** consists of an 940 nm, Light Emitting Diode (LED) and an NPN silicon Phototransistor, which are mounted "side-by-side" on parallel axes in a black opaque plastic housing. This unfocused reflective object sensor is ideal for detection of diffuse materials such as paper, labels, or anything with a matte finish.

Custom electrical, wire and cabling and connectors are available. Contact your local representative or OPTEK for more information.

Applications:

- Non-contact reflective object sensor
- Assembly line automation
- Machine automation
- Machine safety
- End-of-travel sensor
- Door sensor
- Edge detection
- Paper jam detection
- Mark detection

CONTAINS POLYSULFONE

To avoid stress cracking, we suggest using ND Industries' **Vibra-Tite** for thread-locking. **Vibra-Tite** evaporates fast without causing structural failure in OPTEK's molded plastics.
