

400mA LOAD SWITCH FEATURING PNP TRANSISTOR AND N-MOSFET WITH GATE PULL-DOWN RESISTOR

NEW PRODUCT

General Description

- LMN400B01 is best suited for applications where the load needs to be turned on and off using control circuits like micro-controllers, comparators etc. particularly at a point of load. It features a discrete pass transistor with stable $V_{CE(SAT)}$ which does not depend on input voltage and can support continuous maximum current of 400 mA. It also contains a discrete N-MOSFET with gate pull-down resistor that can be used as control. The component devices can be used as a part of a circuit or as a stand alone discrete device.

Fig. 1: SOT-26

Features

- Voltage Controlled Small Signal Switch
- N-MOSFET with Gate Pull-Down Resistor
- Surface Mount Package
- Ideally Suited for Automated Assembly Processes
- Lead Free By Design/ROHS Compliant (Note 1)**
- "Green" Device (Note 2)**

Mechanical Data

- Case: SOT-26
- Case Material: Molded Plastic, "Green" Molding Compound. UL Flammability Classification Rating 94V-0
- Moisture sensitivity: Level 1 per J-STD-020C
- Terminal Connections: See Diagram
- Terminals: Finish - Matte Tin annealed over Copper leadframe. Solderable per MIL-STD-202, Method 208
- Marking & Type Code Information: See Last Page
- Ordering Information: See Last Page
- Weight: 0.016 grams (approx.)

Application Details

- PNP Transistor (DDTB122LU) and N-MOSFET (DSNM6047) with gate pull-down resistor integrated as one in LMN400B01 can be used as a discrete entity for general application or as an integrated circuit to function as a Load Switch. When it is used as the latter as shown in Fig 20, various input voltage sources can be used as long as it does not exceed the maximum ratings of the device. These devices are designed to deliver continuous output load current up to a maximum of 400 mA. The MOSFET Switch draws no current, hence loading of control circuit is prevented. Care must be taken for higher level of dissipation while designing for higher load conditions. These devices provide high power and also consumes less space. The product mainly helps in optimizing power usage, thereby conserving battery life in a controlled load system like portable battery powered applications. (Please see Fig. 21 for one example of a typical application circuit used in conjunction with voltage regulator as a part of power management system)
