Product Description

ASM3P2854B is a part of the two chip custom clock generator solution for NEC FAX system. Together with ASM3P2855A, ASM3P2854B realizes all the seventeen clocks required by the various components and subsystems of the FAX system. It uses an inexpensive 24MHz crystal as the input to generate two 66.66MHz low EMI (spread spectrum) clocks used by ASIC1 for system / DDR SDRAM, two 33.33MHz low EMI (spread spectrum) clocks used by ASIC2 and ASIC3 for system / DDR SDRAM, a 25MHz low EMI (Spread Spectrum) clock used by ASIC1 for LCD, Serial port, and buzzer, a

48MHz clock used by USB1.1 HOST, and a 12MHz clock used by USB PHY (USB2.0). One of the four Programmable clock (PCLK) frequencies of 24.00448MHz, 21.33732MHz, 21.19962MHz and 20.40464MHz used for Printer Engine control is selectable through two Select pins S1 and S2. The accuracy of the synthesized programmable clocks is within +/- 18ppm. The custom clock generator works with a Supply Voltage for 3.3V. The device is available in a 16L TSSOP Green package, in commercial temperature range. The output Clocks have an accuracy of ±50ppm.
