

### General features

- Supports 1.5Mbps and 12Mbps serial data transmission
- ESD HBM:  $\pm 14\text{kV}$  on D+, D- Lines;  $\pm 5\text{kV}$  on VBUS
- ESD Compliant to IEC-61000-4.2 (Level 3)
- Separate I/O supply with operation down to 1.6V
- Integrated speed select termination supply
- Very low power consumption to meet USB 'suspend' current requirements
- Small QFN16 lead free package
- No power supply sequencing requirements
- Software controlled re-enumeration

### Description

The STUSB02E is a single chip USB transceiver that supports both full-speed (12Mbps) and low-speed (1.5Mbps) operation. It has an integrated 5V to 3.3V regulator which allows direct powering from the  $V_{\text{BUS}}$ . The transceiver has an integrated voltage detector to detect the presence of the  $V_{\text{BUS}}$  voltage.

The transceiver also supports Sharing mode when  $V_{\text{BUS}}$  is not present, which allows the D+/D- lines to be shared with other serial protocols.

It is also designed to operate down to 1.6V so that it is compatible with lower system voltages of most portable systems, which include PDAs, MP3 Player and Cell phones.

Table 1. Pin description

PIN N°	SYMBOL	I/O	NAME AND FUNCTION
0	N.C.		Not Connected.
15	$V_{IF}$	I	System Interface Supply Voltage (1.6V to 3.6V). Provides reference supply voltage for system I/O interface signals.
1	SPD	I	Edge Rate Control. A logic HIGH operates at edge rates for "fullspeed" operation. A logic LOW operates edge rates for "lowspeed" operation.
2	RCV	O	Receive Data. Output for USB differential data. (see <a href="#">Table 2</a> )
3	VP	I/O	If OE# = H, VP = Receiver output (+) If OE# = L, VP = Driver input (+) (see <a href="#">Table 2</a> )
4	VM	I/O	If OE# = H, VM = Receiver output (-) If OE# = L, VM = Driver input (-) (see <a href="#">Table 2</a> )
5	CON	I	CONNECT (input). Controls state of $V_{PU}$ . Refer to $V_{PU}$ pin description for detail.
6	GND		Ground Reference
7	SUS	I	Suspend (active-high). Turns off internal circuits to reduce supply current.
9	OE#	I	Output Enable (active-low). Enables transceiver data transmission onto the bus. When not active, the transceiver is in the receive mode. (see <a href="#">Table 2</a> )
10, 11	D-, D+	I/O	Differential data lines. (see <a href="#">Table 2</a> )
12	VTRM	O	3.3V Reference Supply Output. Requires a 1.0 $\mu$ F decoupling capacitor for stability.
13	$V_{PU}$	O	Pull-up Supply Voltage Output. Used to connect 1.5k $\Omega$ pull-up speed detect resistor. If CON = 0, $V_{PU}$ is high impedance. If CON = 1, $V_{PU}$ = 3.3V $\pm$ 10%.
14	$V_{BUS}$	I	USB Bus Supply Voltage (4V to 5.5V). Supplies power to the USB transceiver and internal circuitry.
8	N.C.		Not connected.
16	$V_{BUSDET}$	O	$V_{BUS}$ indicator output. When $V_{BUS}$ > 2.9V, $V_{BUSDET}$ = High and when < 2.2V, $V_{BUSDET}$ = Low.

## 8 Functional description

The STUSB02E is designed to provide USB connectivity in mobile systems where available system supply voltages are not able to satisfy USB requirements. The STUSB02E can operate down to supply voltages of 1.6V. As shown in the circuit above, the STUSB02E takes advantage of the USB supply voltage,  $V_{BUS}$ , to operate the transceiver. The system voltage,  $V_{IF}$ , is used to set the reference voltage used by the digital I/O lines interfacing to the system controller. Internal circuitry provides translation between the USB and system voltage domains.  $V_{IF}$  will typically be the main supply voltage rail for the controller.

In addition, a 3.3V, 10% termination supply voltage,  $V_{PU}$ , is provided to support speed selection.  $V_{PU}$  can be disabled or enabled under software control via the CON input. This allows for software-controlled connect or disconnect states. A 1.5K $\Omega$  resistor is required to be connected between this pin and the D+ or D- lines to respectively specify full speed or low speed operation.

The use of ESD transient protection devices is not required for operation, but is recommended.

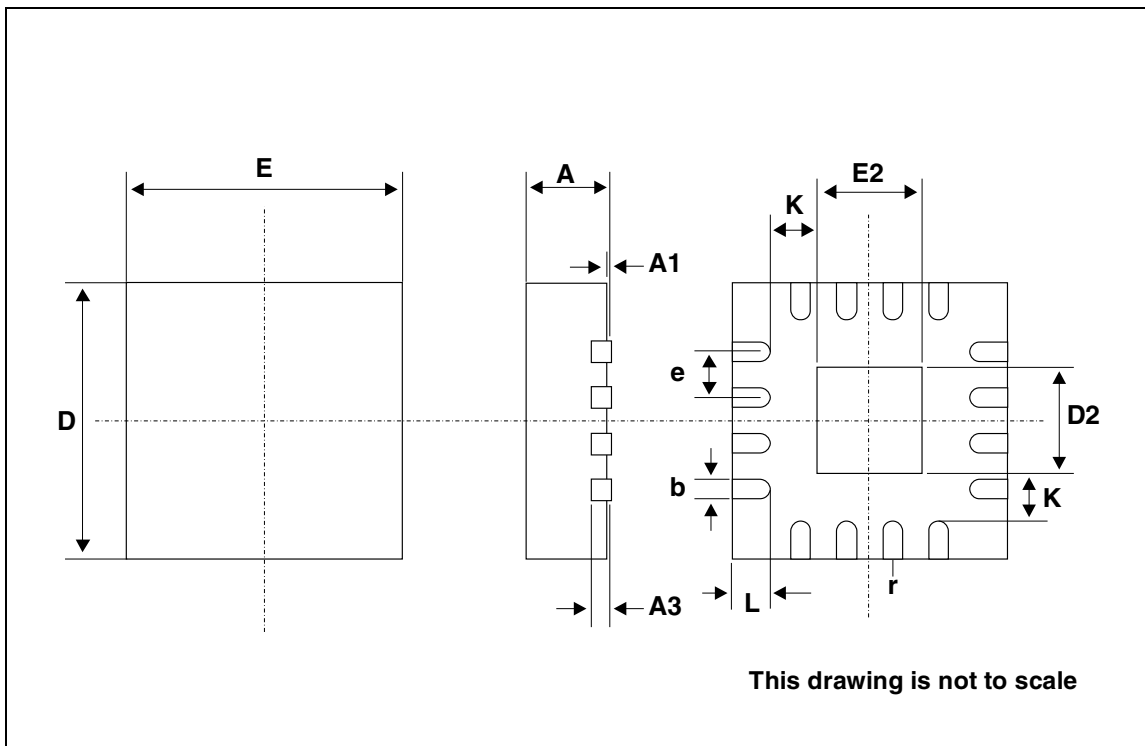

## 9 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK<sup>®</sup> packages. These packages have a Lead-free second level interconnect. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).
