

CYPRESS

ComLink™ Series
CY2LL843

High-drive Two-Channel LVDS Repeater/Mux

Features

- ANSI TIA/EIA-644-1995-compliant
- Designed for data rates to ≥ 700 Mbs = (350 MHz)
- Single 2×2 with high-drive output drivers
- Low -voltage differential signaling with output voltages of ± 350 mV into 50-ohm load version (Bus LVDS)
- Single 3.3V supply
- Accepts ± 350 -mV differential inputs
- Output Drivers are high-impedance when disabled or when $V_{DD} \leq 1.5V$
- 16-pin SOIC/TSSOP packages
- Industrial version available

Description

The Cypress CY2LL843 are differential line drivers and receivers that utilize Low Voltage Signaling or LVDS, to

achieve signaling rates of 700Mbs. The receiver outputs can be switched to either or both drivers through the multiplexer control signals S0/S1. This provides flexibility in application for either a splitter or router configuration with a single device.

The Cypress CY2LL843 are configured as a single two-channel repeater/Mux.

The LVDS standard provides a minimum differential output voltage of 247 mV into a 50-ohm load and receipt of as little as 100 mV signals with up to 1V of DC offset between transmitter and receiver. The Cypress CY2LL843 doubles the output drive current to achieve BusLVDS signaling levels with a faster rise/fall times into 50-ohm load.

A doubly terminated BusLVDS line enables multipoint configurations.

Designed for both point to point based-band multi-point data transmission over controlled impedance lines.

Notes:

- See Figure 1.
- Stresses greater than those listed under absolute maximum ratings may cause permanent damage to the device. This is intended to be a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
- Multiple Supplies:** The voltage on any input or I/O pin cannot exceed the power pin during power-up. Power supply sequencing is NOT required

Notes:

6. All input pulses are supplied by a frequency generator with the following characteristics: t_R and $t_F \leq 1$ nS; pulse rep. rate = 50 Mpps; pulse width = 10 ± 0.2 nS.
7. $R_L = 50$ Ohm.
8. C_L includes instrumentation and fixture capacitance within 6 mm of the DUT.
9. VOC measurement requires equipment with a 3 dB bandwidth of at least 300 MHz.
10. $R_L = 50$ Ohm $\pm 1\%$.
11. Point to Point: $R_L = 50$ Ohm $\pm 1\%$ $C_L 3$ pF.
