

MAXIM

+5V, +10V Precision Voltage References

REF01/REF02

General Description

The REF01 and REF02 are precision voltage references that are pretrimmed to within $\pm 3\%$ of +10V and +5V, respectively. Both references feature excellent temperature stability (as low as 8.5 ppm/ $^{\circ}\text{C}$ worst case), low current drain, and low noise. The REF02 also provides a TEMP pin whose output voltage varies linearly with temperature, making this device suitable for a wide variety of temperature-sensing and control applications. Both devices are available from Maxim in the space-saving SO package, as well as in the standard 8-pin TO-99 and MINI-DIP packages.

Features

- ◆ Pretrimmed to +5V, +10V $\pm 0.3\%$
- ◆ Excellent Temperature Stability: 3ppm/ $^{\circ}\text{C}$
- ◆ Low Noise: 10 $\mu\text{Vp-p}$ (REF02)
- ◆ Low Supply Current: 1.4mA max
- ◆ Short-Circuit Proof
- ◆ Linear Temperature Transducer O/P (REF02)

Ordering Information

| PART | TEMP. RANGE | MAX TEMPCO (ppm/ $^{\circ}\text{C}$) | INITIAL ERROR (mV) | PIN-PACKAGE |
|-----------|---|---------------------------------------|--------------------|---------------|
| REF01EP | 0 $^{\circ}\text{C}$ to +70 $^{\circ}\text{C}$ | 8.5 | ± 30 | 8 Plastic DIP |
| REF01EZ | 0 $^{\circ}\text{C}$ to +70 $^{\circ}\text{C}$ | 8.5 | ± 30 | 8 CERDIP |
| REF01HP | 0 $^{\circ}\text{C}$ to +70 $^{\circ}\text{C}$ | 25 | ± 50 | 8 Plastic DIP |
| REF01HSA | 0 $^{\circ}\text{C}$ to +70 $^{\circ}\text{C}$ | 25 | ± 50 | 8 SO |
| REF01CP | 0 $^{\circ}\text{C}$ to +70 $^{\circ}\text{C}$ | 65 | ± 100 | 8 Plastic DIP |

+5V, +10V Precision Voltage References

ABSOLUTE MAXIMUM RATINGS—REF01

| | | |
|---|---|----------------------|
| Input Voltage | Storage Temperature Range |-65°C to +150°C |
| REF01, A, E, H, All DICE | Operating Temperature Range | |
| REF01C | REF01A, REF01 |-55°C to +125°C |
| Power Dissipation | REF01E, REF01H, REF01C | |
| T099 (J) (derate at 7.1mW/°C above 80°C) | (except REF01CESA) |0°C to +70°C |
| CERDIP (2) (derate at 6.7mW/°C above 75°C) | REF01CESA |-40°C to +85°C |
| Plastic Dip (P) (derate at 5.6mW/°C above 36°C) | DICE Junction Temperature (T _J) |-65°C to +150°C |
| Small Outline (S) (derate at 5.0mW/°C above 55°C) | Lead Temperature (soldering, 60s) |+300°C |
| Output Short-Circuit Duration | | |
| (to ground or V _{IN}) | |Indefinite |

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—REF01

Note 1: ΔV_{OT} is defined as the absolute difference between the maximum output voltage and the minimum output voltage over the specified temperature range expressed as a percentage of 10V:

$$\Delta V_{OT} = \left| \frac{V_{MAX} - V_{MIN}}{10V} \right| \times 100$$

Note 2: ΔV_{OT} specification applies trimmed to +10.000V or untrimmed.

Note 3: TCV_O is defined as ΔV_{OT} divided by the temperature range.

Note 4: Line and Load Regulation specifications include the effect of self heating.

Note 5: Sample tested.

Notes: See previous page.

Output Adjustment

The REF01 trim terminal can be used to adjust the voltage over a $10V \pm 300mV$ range. This feature allows the system designer to trim system errors by setting the reference to a voltage other than 10V, including 10.240V for binary applications (see the *Typical Operating Circuit* section).

Adjustment of the output does not significantly affect the temperature performance of the device. The temperature coefficient change is approximately 0.7ppm/ $^\circ C$ for 100mV of output adjustment.

Notes: See previous page.

Output Adjustment

The REF02 trim terminal can be used to adjust the output voltage over a $5V \pm 300mV$ range. This feature allows the system designer to trim system errors by setting the reference to a voltage other than 5V (refer to the *Typical Operating Circuit* section).

Adjustment of the output does not significantly affect the temperature performance of the device. Typically, the temperature coefficient change is 0.7ppm/ $^\circ C$ for 100mV of output adjustment.

Temperature Voltage Output

The REF02 provides a temperature-dependent output voltage on the TEMP pin. This voltage is proportional to the absolute temperature, and has a scale factor of approximately 2.1mV/ $^\circ C$ (Figure 2).

$$\text{Output Voltage} = 2.1(T + 273)mV$$

where T = Temperature in $^\circ C$
