Quartz Crystal Oscillator Module IC

range of quartz oscillator module ICs fabricated using NPC's original molyb-
dum. Each IC consists of a low-voltage, low-current oscillator circuit and
incorporate oscillation capacitors having excellent frequency characteristics, and
output of a quartz fundamental wave without connecting any external compo-

Supply voltage of
(range 2.7 to 5.5V)
inverter amplifier
construction

- Low current consumption
- Built-in oscillation capacitors CG and CD
- Output tristate function
- Low current consumption
- Standby function (Standby: oscillation stop, output high impedance).

Function
Output high impedance, internal pull-up resistor (Pull-up current at the standby current)
