SOLID STATE OPTRONICS

AD6C211

DESCRIPTION

The AD6C211 is a bi-directional, single-pole, single-throw, normally open multipurpose solid-state relay. It is designed to replace electromechanical relays in general purpose switching applications. The relay consists of an integrated circuit that drives two rugged source-to-source enhancement type DMOS transistors - optically coupled to a light emitting diode. The output MOS transistors are protected with free-wheeling diodes that can handle up to 5A of inrush current, making the relay ideal for switching lamps and highly inductive loads.

FEATURES

- Low input control power consumption (1.5mA TYP)
- 150mA maximum continuous load current
- 20 ohms maximum on-resistance
- High input-to-output isolation
- Long life/high reliability

OPTIONS/SUFFIXES*

- -S   Surface Mount Leadform Option
- -TR   Tape and Reel Option

NOTE: Suffixes listed above are not included in marking on device for part number identification.
