# Low Power, <100 Lux Optimized, Analog Output Ambient Light Sensor

## ISL76671

The ISL76671 is a low cost, light-to-voltage silicon optical sensor combining a photodiode array, a non-linear current amplifier and a micro-power op amp on a single monolithic IC. Similar to the human eye, the photodiode array has peak sensitivity at 550nm and spans the wavelength range 400nm to 600nm, rejecting UV and IR light. The input luminance range is from 0.01 lux to 100 lux.

The integrated non-linear current amplifier boosts and converts the photodiode signal into a square root output format, extending dynamic range while maintaining excellent sensitivity in dimly lit conditions. As such, the part is ideal for measuring incident daylight when mounted behind heavily smoked bezels used around displays or behind mirrors.

The device consumes minimum power. A dark current compensation circuit minimizes the effect of temperature dependent leakage currents in the absence of light, improving the light sensitivity at low lux levels. The output gain has been optimized to require a relatively low value external bias resistor that falls within recommended automotive EMI limits. The built-in 1µA op amp gives the ISL76671 an output voltage driving advantage for heavier loads that can drive an ADC directly.

The ISL76671 is housed in an ultra compact 2mmx2.1mm ODFN plastic surface mount package. Operation is rated from -40°C to +105°C, Grade 2 per AECQ100.

## Features

- Square Root Voltage Output
- 0.01 lux to 100 lux Range
- 1.8V to 3V Supply Range
- Close to Human Eye Spectral Response
- Fast Response Time
- Internal Temperature Compensation
- Good IR Rejection
- Low Supply Current
- Operating Temperature Range -40°C to +105°C
- 6 Lead ODFN: 2mmx2.1mmx0.7mm
- Pb-Free (RoHS Compliant)
- AECQ100 Qualified

## Applications

- Display Backlight Control - Central Info Display & Instrumentation
- Anti-glare Mirror Systems - Specified to Operate Behind Bezel Mounting

# Pin Descriptions

| PIN NUMBER | PIN NAME | PIN DESCRIPTION |
|---|---|---|
| 1 | VDD | Voltage Supply (1.8V to 3V). |
| 2 | GND | Ground |
| 3, 5 | NC | No connect |
| 4 | REXT | Connected to an external resistor to GND, setting the light-to-voltage scaling constant. A $R_{EXT}$ value of 100kΩ is recommended. |
| 6 | VOUT | Voltage Output. |
| - | PAD | Thermal Pad. The thermal pad can be connected to GND or electrically isolated. |

# Ordering Information

| PART NUMBER (Notes 1, 2, 3) | PACKAGE (Pb-Free) | PKG. DWG. # |
|---|---|---|
| ISL76671AROZ-T7 | 6 Ld ODFN (Tape and Reel) | L6.2X2.1 |

NOTES:

1. Please refer to TB347 for details on reel specifications.

2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets; molding compounds/die attach materials and NiPdAu plate -e4 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

3. For Moisture Sensitivity Level (MSL), please see device information page for ISL76671. For more information on MSL please see techbrief TB477.

Storage Temperature . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .-40°C to +105°C
Operating Temperature . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .-40°C to +105°C
Pb-Free Reflow Profile (*) . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . see TB477
   *Peak temperature during solder reflow +260°C max

*CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.*

NOTES:

4. $\theta_{JA}$ is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief TB379.

5. For $\theta_{JC}$, the "case temp" location is the center of the exposed metal pad on the package underside.

## Electrical Specifications

Unless otherwise noted, all parameter limits are established over the recommended operating conditions: V$_{DD}$ = 3V, T$_A$ = -40°C to +105°C, R$_{EXT}$ = 100kΩ, no load at VOUT, and green LED light. (Typical values are at T$_A$ = +25°C). **Boldface limits apply over the operating temperature range, -40°C to +105°C.**

| PARAMETER | DESCRIPTION | CONDITION | MIN (Note 6) | TYP | MAX (Note 6) | UNIT |
|---|---|---|---|---|---|---|
| E | Range of Input Light Intensity for Square Root Relationship to be Held | | | 0.01 - 100 | | Lux |
| V$_{DD}$ | Operating Supply Voltage | | 1.8 | | 3 | V |
| I$_{DD}$ | Supply Current | E = 0 lux, -40°C to 60°C | | 0.7 | **2** | µA |
| | | E = 0 lux, -40°C to 105°C | | | **5** | µA |

# Application Information

## Light-to-Voltage Conversion

The ISL76671 has responsiveness that is a square-root function of the light intensity intercepted by the photodiode in lux. Because the photodiode has a responsivity that resembles the human eye, conversion rate is independent of the light source (fluorescent light, incandescent light or direct sunlight).

$$V_{OUT} = \frac{18\mu A}{\sqrt{100lux}}\sqrt{E} \times R_{EXT}$$   (EQ. 1)

In Equation 1, $V_{OUT}$ is the output voltage, E is the light intensity and $R_{EXT}$ is the value of the external resistor. The $R_{EXT}$ is used to set the light-to-voltage scaling constant. The compliance of the ISL76671's output circuit may result in premature saturation when an excessively large $R_{EXT}$ is used. A $R_{EXT}$ value of 100kΩ is recommended for automotive applications. The output compliance voltage is 700mV below the supply voltage as listed in $V_{O-MAX}$ of the "Electrical Specifications" table on page 3.

## Optical Sensor Location Outline

The green area in Figure 20 shows the optical sensor location outline of ISL76671. Along the pinout direction, the center line (CL) of the sensor coincides with that of the packaging. The sensor width in this direction is 0.39mm. Perpendicular to the pinout direction, the CL of the sensor has an 0.19mm offset from the CL of packaging away from pin 1. The sensor width in this direction is 0.46mm.

# Products

Intersil Corporation is a leader in the design and manufacture of high-performance analog semiconductors. The Company's products address some of the industry's fastest growing markets, such as, flat panel displays, cell phones, handheld products, and notebooks. Intersil's product families address power management and analog signal processing functions. Go to www.intersil.com/products for a complete list of Intersil product families.

For a complete listing of Applications, Related Documentation and Related Parts, please see the respective device information page on intersil.com: ISL76671

To report errors or suggestions for this datasheet, please go to: www.intersil.com/askourstaff

FITs are available from our website at: http://rel.intersil.com/reports/sear

For additional products, see www.intersil.com/product_tree

Intersil products are manufactured, assembled and tested utilizing ISO9000 quality systems as noted in the quality certifications found at www.intersil.com/design/quality

*Intersil products are sold by description only. Intersil Corporation reserves the right to make changes in circuit design, software and/or specifications at any time without notice. Accordingly, the reader is cautioned to verify that data sheets are current before placing orders. Information furnished by Intersil is believed to be accurate and reliable. However, no responsibility is assumed by Intersil or its subsidiaries for its use; nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Intersil or its subsidiaries.*
